Locational Based Marginal Pricing

Mathangi Srinivasan
Senior Market Trainer, NYISO

New York Market Orientation Course (NYMOC)

October 16-19, 2018
Rensselaer, NY
Benefits to Understanding

- Locational Based Marginal Pricing
  - Your Business Decisions
    - Be better informed for your bidding, forecasting, and investing decisions through understanding the price signals being sent
  - Your Financial Results
    - Understanding payments and charges on your invoice
Locational Based Marginal Pricing

- SESSION OBJECTIVES:
  - Understand the Basics Behind LBMP
    - Definition
    - Show how LBMPs are Established
    - Name the Three Components of LBMP
  - Complete Examples that Demonstrate LBMP Concepts
LBMP - Defined

- A methodology where the price of Energy at each location in the NYS Transmission System/NYCA is equivalent to the cost to supply the next increment of Load at that location.

- The cost to provide the next MW of Load at a specific location in the grid is the Marginal Price (LBMP)
LBMP – The Basics

- LBMP is established for the Day Ahead and the Real Time Markets
  - Day Ahead Market
    - Security Constrained Unit Commitment (SCUC)
    - Hourly Prices
  - Real Time Market
    - Real Time Dispatch (RTD)
    - 5 Minute Interval Prices
LBMP: Co-Optimized Based on Bids and Offers

NYISO SCUC/RTD

CO-OPTIMIZATION FOR LOWEST TOTAL PRODUCTION COST$
LBMP - Established

- System is bid-based
  - Offers/Bids are Confidential
  - LBMPs are published, keeping market visible
LBMP – Established Summary

- System establishes load
- Generation offers evaluated
- Transmission Constraints taken into account
- Economic generation dispatched
- Cost of Next MW of Load - Market Clearing Price
LBMP Components

- Three Components Comprise the LBMP
  - Marginal Energy Price Component
  - Marginal Loss Price Component
  - Marginal Congestion Price Component

LBMP = Energy + Loss - Congestion
LBMP Components - Energy

- Marginal Energy Price Component
  - Basic component of the LBMP at all buses in system – NYISO Reference Bus (Marcy), posted on NYISO site as: “NYISO_LBMP_Reference”

![Map of New York State with Marcy Reference Bus marked]

Demand+1
LBMP Components - Losses

- Marginal Loss Price Component
  - Some amount of generation will be lost along path to load due to heat dissipation
    - Transmission Losses
    - Approx. 2.5% of Energy is consumed by Losses in NYCA
  - Marginal Loss Component takes this into account
  - If Losses were zero, Loss $ Component would be zero as well
LBMP Components - Losses

- Marginal Loss Price Component
  - Factors used to determine losses
    - Delivery Factor
    - Energy Price Component at NYISO Reference Bus
  - Delivery Factor
    - Impact on Overall System Losses (+/-) when power injected at a Specific Generator Bus

LBMP Components - Losses

- Marginal Loss Price Component
  - For Detailed Information see OATT Attachment J or MST Attachment B
  - Market Participant User’s Guide 3.3.1
LBMP Components - Congestion

- Marginal Congestion Price Component
  - In some instances, dispatching least costly generation may exceed line limitations
  - More costly units may subsequently be dispatched to avoid exceeding those limits
Determining the Marginal Congestion Price

West Zone
Load A
50 MW

East Zone
Load B
150 MW
Congestion

Congestion occurs when the Power flow reaches the Transmission Limit.

Transmission Line Limit
Congestion

- To maintain efficient and reliable Transmission system
  - Transmission limits cannot be exceeded
  - When Transmission limits reached, generators from different buses are dispatched to meet load

- When there is congestion, LBMPs can differ between buses
Contributing Congestion Factors

- Generator Derates
- Line Outages
- Transaction Curtailments
- TSA – Severe Weather Conditions
- Reserve Shortage
- Alert State
- OOM & SRE Request
- Forecast Load vs. Actual RT Load
Example 3: Energy and Congestion, No Losses

Total Load = 400 MW
Example 3: Energy and Congestion

Gen ‘Power Up’

FOR TRAINING PURPOSES ONLY
Let’s Review

LBMP is the cost to provide the?
   a) Exact MW of Load at a specific location in grid
   b) Next MW of Load at a specific location in grid

LBMP is established through?
   a) Economic Dispatch process
   b) Random Generation Selection

LBMP is comprised of?
   a) One Single Price Component
   b) Three Separate Price Components
Let’s Review

Posted Prices are?
- a) Visible on an individual and confidential basis
- b) Visible to the public on NYISO’s website

LBMP for Load is?
- a) Established at each LSE’s location
- b) Established at a Zonal level

LBMP for a Generator is?
- a) Established at a Zonal level
- b) Established at the Generator Bus
Locational Based Marginal Pricing

SESSION OBJECTIVES:

• Understand the Basics Behind LBMP
  • Definition
  • Show how LBMPs are Established
  • Name the Three Components of LBMP
• Complete Examples that Demonstrate LBMP Concepts
