

2.177a.1 System Restoration Unit

A Generator located in the Consolidated Edison Transmission District with the ability to provide Black Start and System Restoration Service that has been designated by Consolidated Edison as necessary to its Black Start and System Restoration plan. Such Generators must have the ability to synchronize with the New York State Transmission System and/or energize a portion of that system when directed to do so by Consolidated Edison without assistance from the network. They must satisfy Black Start and Restoration Services capability testing criteria established by Consolidated Edison, incorporated in the ISO Procedures and incorporated by reference into this ISO Services Tariff pursuant to Rate Schedule 5 hereto.
