

## **Section FF-2 Designation of Load Serving Entity for Generating Units in NYISO's Station Power Program**

The NYISO Station Power Program requires that in the event the Generator does not have sufficient output to supply itself (via Self-Supply or Remote Self-Supply), the Generator must take third party supply from a qualified New York State Load Serving Entity (LSE)<sup>20</sup>. (See Services Tariff Section 4.7 and Technical Bulletin #117).

NYISO Form FF-2 is used to (i) designate the LSE that will supply Station Power in the event output in a month is net negative, (ii) change a designated third party supplier, and (iii) provide notice of this information, and any changes, to Customers.<sup>21</sup> Generators must have a retail account with a third party supplier in the Transmission Owner's transmission district in which the station receiving Station Power is located. NYISO Form FF-2 follows.

### Instructions:

1. Fill in the blanks for Generator Owner information.
2. Have an authorized representative of Generator Owner sign NYISO Form FF-2.
3. Forward the form to the respective LSE or Transmission Owner. The LSE or Transmission Owner will fill in the blanks for any remaining information. The LSE or Transmission Owner should then sign the form and forward the form to:

NYISO Registration Coordinator  
10 Krey Blvd., Rensselaer, NY 12144

customer\_registration@nyiso.com

4. Upon receipt, the NYISO will review the form for completion and forward the completed NYISO Form FF-2 to the respective Transmission Owner along with the Generator Owner's Station Power registration materials.

---

<sup>20</sup> This is the LSE or Transmission Owner that is the third party retail supplier for the Generator.

<sup>21</sup> For just cause, the NYISO may with prior approval accept a letter on the Applicant's letterhead and countersigned by the relevant Transmission Owner or LSE.

**FORM FF-2**

**DESIGNATION OF LOAD SERVING ENTITY FOR GENERATING UNITS IN  
NYISO'S STATION POWER PROGRAM**
