

Proposal for Resolution of Near-term VSS Issues

NYISO Business Issues Committee

August 24, 2005

Agenda Item 8

Consensus on Near-term Issues

- MSWG August 15 meeting:
 - *Capacity basis for compensation will be NET demonstrated lagging MVAR*
 - All Testing to be conducted during Summer capability period (regardless of Transmission District location)
 - All test reports to be filed electronically using NYISO supplied reporting form
 - To the extent that Net MVAR metering is not available, NYISO will calculate Net MVAR from metered Gross MVAR and MW output using standard power flow calculation
 - *OATT Rate Schedule 2 Revenue Requirement to be adjusted reflecting generation additions and retirements as of October 31, 2005 (using same method presented in Dec. 2001 filing)*

Calculation of Rates

- Following slides detail calculation of approximate rates for
 - *OATT Rate Sch. 2 Revenue Requirement*
 - *Service Tariff Rate Sch. 2 Compensation Rate*
- Tables show comparison of proposed Net-Lag to current and Gross-Lag
- *Tables 2 and 3 Rates indicated are approximate and may change based on final confirmation of capacity adjustments and capability tests*

Determination of VSS Rates

- OATT Rate Sch. 2
 - *Revenue Requirement*
 - Adjust capacity basis for generation additions and retirements
 - *Forecast Energy Withdrawal*
 - 2006 Forecast of energy withdrawal by loads
 - Forecast of energy withdrawal - exports
 - Rate is \$/MWhr
 - *Current method includes both loads and exports*
 - Socialized across NYCA
- Svc. Tariff Rate Sch. 2
 - *Existing Rate \$3919 (from 2001)*
 - *Determine available \$\$\$*
 - Use calculated OATT RS 2 revenue requirement
 - Calculate new compensation rate
 - Rate is \$/MVAr-yr

VSS Compensation Rate Calculation (Revised Revenue Requirement)

- Reference calculation based on existing \$3919 compensation rate from 2001 filing (Table 1)
 - *All Tables use the system average power factor based on most recent test year data reported (2004)*
- Calculate new *VSS Compensation Rate*
 - *Using the Proposed Revenue Requirement*
 - Adjustment based on changes to installed capacity for generation additions and retirements
 - Assume no inflation
 - For comparison Tables 1 & 2 include both Gross-Lag and Net-Lag calculations

Table 1 – Existing Rate (2001 filing)

	Gross Lagging	Net Lagging
MW Capacity	39851	39851
average pF	0.907	0.921
MVAr capacity	16657	15174
VSS Comp. Rate (ST RS 2)	\$3,919	\$4,302
Revenue Req. OATT RS 2	\$65,278,783	\$65,278,783

Table 2 – Proposed Rev. Req. No Inflation

	Gross Lagging	Net Lagging
MW Capacity	39851	39851
average pF	0.907	0.921
MVAr capacity	16657	15174
Revenue Req.		
OATT RS 2	\$67,664,043	\$67,664,043
VSS Comp. Rate (ST RS 2)	\$4,062	\$4,459

Table 3 -- OATT Rate Schedule 2 Calculation
(Revised Revenue Requirement)

NYISO Transmission District VSS Cost Allocation to Loads	Generation In-Service in 2006 (MW)	VSS Revenue Requirement in 2006	GW-Hr Energy Withdrawal forecast for 2006	OATT Rate Sch. 2 Revenue Requirement
<i>Total NYCA</i>	39,851	\$67,664,843	163908	\$0.413
Total NYCA+exports	39,851	67,664,843	172535	\$0.392

Issues continuing under discussion

- Proposal to restructure the OATT RS 2 revenue requirement on a locational basis
- Should inflation be considered and rate?
