

BIC Motion: TSC Revenue Reporting 6-26-02

Whereas... the NERTO process determined the bulk of the benefits to be associated with elimination of export transaction "taxes" (primarily composed of transmission service charges).

Whereas... NY Participants have been trying to ascertain the level of the TSC revenues related to said exports.

Whereas... the TOs have made no use of the ability to discount TSCs by interface or on/off peak.

Whereas... there are concerns about recovery of this revenue if the TSCs were eliminated.

Whereas... the NYISO has to process all the actual transaction schedules by interface to be able to apply the flow weighted TSCs for subsequent billing by the TOs, that the data being requested appears to be readily available for presentation to the BIC.

Select hereby moves to direct the NYISO to provide monthly TSC revenue (\$'s) by interface - NE, PJM, HQ and OH for each month as part of the NYISO Monthly report starting as soon as reasonably possible. We further moves to direct that the NYISO provide as much historical data in the same manner as is reasonably practicable.
