

Earthquake - August 23, 2011

- On Tuesday, August 23 at approximately 13:51, the east coast experienced an earthquake of 5.9 magnitude centered about 84 miles from Washington DC (<u>www.earthquake.usgs.gov</u>)
- PJM lost over 3,000 MW of generation including nuclear power generation in the Dominion Zone.
- PJM requested Simultaneous Activation of Reserves and the ISO initiated a reserve pickup for its 317 MW share
- The ISO declared the Alert State for actual frequency below 59.95 Hz (actual 59.928 Hz)

Hurricane Irene - Preparations

- All transmission line maintenance outages and generation scheduled outages were cancelled
- The ISO participated on several NPCC conference calls and several NY Transmission Owners conference calls to coordinate preparedness plans
- A Northeast Electric Gas Operating Committee conference call was held to ensure all gas pipeline maintenance outages were cancelled and discuss pipeline asset performance during storm conditions
- The ISO scheduled additional weekend control center staff, alternate control center staff, and other engineering, IT and facilities support staff
- On Friday, August 26 the ISO scheduled an SRE of Roseton 2 for Saturday and Sunday to address potential voltage concerns resulting from storm related demand and generation uncertainty
- The Transmission Owners scheduled a number of DARUs and SREs in preparation to secure local transmission facilities during the storm

Hurricane Irene - August 27-28, 2011

- Saturday, August 27 Hurricane Events
 - Coordination conference calls continued with NPCC and Transmission Owners
 - At 2042 Con Edison invoked Thunder Storm Alert
- Sunday, August 28 Hurricane Events
 - Coordination conference calls continued with NPCC and Transmission Owners
 - At 05:05 the ISO declared the Alert State for severe weather
 - New York customer outages reached approximately 954,000 customers as reported on the Transmission Owner web sites
 - Storm related transmission outages included:
 - Three 345 kV: W89 Pleasantville-Dunwoodie, 68 Bowline-Ladentown, 67 Ladentown-Haverstraw
 - One 230 kV: E205W Rotterdam-Bear Swamp
 - Multiple 138 kV and 115 kV transmission outages
 - Storm related generation outages" less than 1000 MW with majority due to transmission
 - At 13:25 Con Edison cancelled Thunder Storm Alert and at 14:15 the ISO terminated the Alert State for severe weather.
 - The ISO did not need to activate Demand Response
