R. SY Princetown - Install

	NAT & NYPA - T028 - (Segment A, Enhanced)
	ESTIMATE ASSUMPTIONS & CLARIFICATIONS
1	Cost Estimate is based on 2017 rates.
2	Construction schedule is in accordance with proposed schedule - we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction
_	schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
	We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
	All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
5	We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type.
6	Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
7	Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
8	Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
9	A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
10	We have assumed that all project details provided are accurate unless noted otherwise.
11	Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
12	A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
13	A contractor allowance of 4.44% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
14	An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
15	A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
16	An allowance of 5% for transmission design and engineering has been included in the total section.
17	An allowance of 8% for substation design and engineering has been included in the total section.
18	An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
19	An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
20	An allowance of 3.75% for substation testing and commissioning has been included in the total section.
21	An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
	New York state sales tax of 8% is included in all material pricing.
23	An allowance of 1.5% for insurance is included in the DPS sheet.
24	The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.

schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.). We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days). All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017. We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not et information to provide a quantified estimate for this item, allowance is included in the contingency monies. Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for for quotes. Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing. A Contractor Mark-Up (OH&P) of 15% has been included in the Total section. We have assumed that all project details provided are accurate unless noted otherwise. A contractor allowance of 1% for mobilization and demobilization has been included in the total section. A contractor allowance of 3.698% for project management and staffing has been included in the total section. A contractor allowance of 1% for transmission design and engineering has been included in the total section. An allowance of 5% for transmission design and engineering has been included in the total section. An allowance of 0.7% for substation design and engineering has been included in the total section. ESTIMATE ASSUMPTIONS & CLARIFICATIONS

- 1 Cost Estimate is based on 2017 rates.
- Construction schedule is in accordance with proposed schedule we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
- 3 We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
- 4 All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
- We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. 20% of the total length of the line is assumed to use Type 1 Gravel road and 80% of the line length access to be used wood matting. In addition 75 feet of wood matting is included from the access matting to the work pad area matting. The estimate also include 5,000 square feet of wood matting for each structure work area within the ROW. For the ground restoration (seed, straw and woven mat), 20% of the work pad area included.
- Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
- Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
- 8 Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
- 9 A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
- 10 We have assumed that all project details provided are accurate unless noted otherwise.
- 11 Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
- 12 A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
- A contractor allowance of 4.315% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
- An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
- 15 A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
- 16 An allowance of 5% for transmission design and engineering has been included in the total section.
- 17 An allowance of 8% for substation design and engineering has been included in the total section.
- 18 An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
- 19 An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
- 20 An allowance of 3.75% for substation testing and commissioning has been included in the total section.
- An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
- New York state sales tax of 8% is included in all material pricing.
- 23 An allowance of 1.5% for insurance is included in the DPS sheet.
- 24 Knickerbocker to Churchtown substation; 0.4 miles of 345kV conductor from the junction have been added.
- 25 An additional Quantity of 5% have been added to conductors, OPGW, & OHSW for sag and jumpers.
- Rock excavation depth in Foundation data provided in the proposal.
 - Cricket Valley to Long Mountain line upgrade: The length of the re-conductor between Cricket Valley and the NY/CT border is 3.3 miles and will remove the existing (to be installed on CV project) 2 bundle 795 ACSS conductor and install new 2 bundle Rail 954 ACSS conductor.
 - -The length of the re-conductor between the NY/CT border and Long Mountain is 6 miles and will remove the existing single 2156 ACSS conductor and install new single Thrasher 2312
- 27 ACSS conductor.
 - -The Insulators and associated conductor hardware will be replaced.
 - -The existing structures are assumed to have adequate strength to support the new conductors.
 - -The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
- 28 The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.

	NextEra T022 (Segment B)
	ESTIMATE ASSUMPTIONS & CLARIFICATIONS
1	Cost Estimate is based on 2017 rates.
2	Construction schedule is in accordance with proposed schedule - we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
3	We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
4	All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
5	We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. 20% of the total length of the line is assumed to use Type 1 Gravel road and 80% of the line length access to be used wood matting. In addition 75 feet of wood matting is included from the access matting to the work pad area matting. The estimate also include 5,000 square feet of wood matting for each structure work area within the ROW. For the ground restoration (seed, straw and woven mat), 20% of the work pad area included.
6	Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
7	Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
8	Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
9	A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
10	We have assumed that all project details provided are accurate unless noted otherwise.
11	Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
12	A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
13	A contractor allowance of 5.406% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
14	An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
15	A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
16	An allowance of 5% for transmission design and engineering has been included in the total section.
17	An allowance of 8% for substation design and engineering has been included in the total section.
18	An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
19	An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
20	An allowance of 3.75% for substation testing and commissioning has been included in the total section.
21	An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
22	New York state sales tax of 8% is included in all material pricing.
23	An allowance of 1.5% for insurance is included in the DPS sheet.
24	From Churchtown to Pleasant Valley only one line of Lattice Structures is to be removed.
25	From Churchtown to Pleasant Valley; Churchtown loop around 345kV conductor 0.3 miles have been added.
26	An additional Quantity of 5% have been added to conductors, OPGW, & OHSW for sag and jumpers.
27	Rock excavation not provided in proposal foundation data, most of the foundation are concrete pole direct embedded, rock excavation assumed 50% for T022 (Churchtown to Pleasant Valley) and rest 75% of quantities of National Grid's proposal.
	Cricket Valley to Long Mountain line upgrade: The length of the re-conductor between Cricket Valley and the NY/CT border is 3.3 miles and will remove the existing (to be installed on CV project) 2 bundle 795 ACSS conductor and install new 2 bundle Rail 954 ACSS conductor.
20	-The length of the re-conductor between the NY/CT border and Long Mountain is 6 miles and will remove the existing single 2156 ACSS conductor and install new single Thrasher 2312 ACSS conductor.
28	
	-The Insulators and associated conductor hardware will be replaced.
	-The existing structures are assumed to have adequate strength to support the new conductors.
20	-The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
29	The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.

	NextEra T023 (Segment B Alternate)
	ESTIMATE ASSUMPTIONS & CLARIFICATIONS
1	Cost Estimate is based on 2017 rates.
2	Construction schedule is in accordance with proposed schedule - we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
3	We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
4	All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
5	We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. 20% of the total length of the line is assumed to use Type 1 Gravel road and 80% of the line length access to be used wood matting. In addition 75 feet of wood matting is included from the access matting to the work pad area matting. The estimate also include 5,000 square feet of wood matting for each structure work area within the ROW. For the ground restoration (seed, straw and woven mat), 20% of the work pad area included.
6	Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
7	Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
8	Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
9	A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
10	We have assumed that all project details provided are accurate unless noted otherwise.
11	Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
12	A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
13	A contractor allowance of 5.423% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
14	An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
15	A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
16	An allowance of 5% for transmission design and engineering has been included in the total section.
17	An allowance of 8% for substation design and engineering has been included in the total section.
18	An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
19	An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
20	An allowance of 3.75% for substation testing and commissioning has been included in the total section.
21	An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
22	New York state sales tax of 8% is included in all material pricing.
23	An allowance of 1.5% for insurance is included in the DPS sheet.
24	From Churchtown to Pleasant Valley; Churchtown loop around 345kV conductor 0.3 miles have been added.
25	An additional Quantity of 5% have been added to conductors, OPGW, & OHSW for sag and jumpers. Rock excavation not provided in proposal foundation data, most of the foundation are concrete pole direct embedded, rock excavation assumed 50% for T022 (Churchtown to Pleasant
26	Valley) and rest 75% of quantities of National Grid's proposal.
	Cricket Valley to Long Mountain line upgrade: The length of the re-conductor between Cricket Valley and the NY/CT border is 3.3 miles and will remove the existing (to be installed on CV
	project) 2 bundle 795 ACSS conductor and install new 2 bundle Rail 954 ACSS conductor.
	-The length of the re-conductor between the NY/CT border and Long Mountain is 6 miles and will remove the existing single 2156 ACSS conductor and install new single Thrasher 2312
27	ACSS conductor.
-	-The Insulators and associated conductor hardware will be replaced.
	-The existing structures are assumed to have adequate strength to support the new conductors.
	-The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
28	The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.

	NAT - NYPA - T029 - (Segment B)
	ESTIMATE ASSUMPTIONS & CLARIFICATIONS
1	Cost Estimate is based on 2017 rates.
2	Construction schedule is in accordance with proposed schedule - we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
3	We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
4	All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
5	We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. 20% of the total length of the line is assumed to use Type 1 Gravel road and 80% of the line length access to be used wood matting. In addition 75 feet of wood matting is included from the access matting to the work pad area matting. The estimate also include 5,000 square feet of wood matting for each structure work area within the ROW. For the ground restoration (seed, straw and woven mat), 20% of the work pad area included.
6	Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
7	Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
8	Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
9	A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
10	We have assumed that all project details provided are accurate unless noted otherwise.
11	Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
12	A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
13	A contractor allowance of 5.367% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
14	An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
15	A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
16	An allowance of 5% for transmission design and engineering has been included in the total section.
17	An allowance of 8% for substation design and engineering has been included in the total section.
18	An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
19	An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
20	An allowance of 3.75% for substation testing and commissioning has been included in the total section.
21	An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
22	New York state sales tax of 8% is included in all material pricing.
23	An allowance of 1.5% for insurance is included in the DPS sheet.
24	Knickerbocker to Churchtown substation; 0.4 miles of 345kV conductor from the junction have been added.
25	An additional Quantity of 5% have been added to conductors, OPGW, & OHSW for sag and jumpers.
26	Rock excavation depth in Foundation data provided in the proposal.
	Middletown to Shoemaker Line upgrade: The length of the line segment is 0.88 miles
27	-The re-conductor will remove the existing 2 bundle 1033.5 ACSR conductor and install new 2 bundle Bluejay 1113 ACSS conductor
27	-The Insulators and associated conductor hardware will be replaced The opinion of the base and associated conductor hardware will be replaced.
	-The existing structures are assumed to have adequate strength to support the new conductors
	-The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings. Cricket Valley to Long Mountain line upgrade: The length of the re-conductor between Cricket Valley and the NY/CT border is 3.3 miles and will remove the existing (to be installed on CV
	project) 2 bundle 795 ACSS conductor and install new 2 bundle Rail 954 ACSS conductor.
	-The length of the re-conductor between the NY/CT border and Long Mountain is 6 miles and will remove the existing single 2156 ACSS conductor and install new single Thrasher 2312
28	ACSS conductor.
20	-The Insulators and associated conductor hardware will be replaced.
	-The existing structures are assumed to have adequate strength to support the new conductors.
	-The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
29	The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.

	NAT - NYPA - T030 - (Segment B Enhanced)
	ESTIMATE ASSUMPTIONS & CLARIFICATIONS
1	Cost Estimate is based on 2017 rates.
	Construction schedule is in accordance with proposed schedule - we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction
2	schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
3	We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
4	All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
5	We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. 20% of the total length of the line is assumed to use Type 1 Gravel road and 80% of the line length access to be used wood matting. In addition 75 feet of wood matting is included from the access matting to the work pad area matting. The estimate also include 5,000 square feet of wood matting for each structure work area within the ROW. For the ground restoration (seed, straw and woven mat), 20% of the work pad area included.
6	Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
7	Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
8	Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
9	A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
10	We have assumed that all project details provided are accurate unless noted otherwise.
11	Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
12	A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
13	A contractor allowance of 5.061% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
14	An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
15	A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
16	An allowance of 5% for transmission design and engineering has been included in the total section.
17	An allowance of 8% for substation design and engineering has been included in the total section.
18	An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
19	An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
20	An allowance of 3.75% for substation testing and commissioning has been included in the total section.
21	An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
22	New York state sales tax of 8% is included in all material pricing.
23	An allowance of 1.5% for insurance is included in the DPS sheet.
24	Knickerbocker to Churchtown substation; 0.4 miles of 345kV conductor from the junction have been added.
25	An additional Quantity of 5% have been added to conductors, OPGW, & OHSW for sag and jumpers.
26	Rock excavation depth in Foundation data provided in the proposal.
	Middletown to Shoemaker Line upgrade: The length of the line segment is 0.88 miles
	-The re-conductor will remove the existing 2 bundle 1033.5 ACSR conductor and install new 2 bundle Bluejay 1113 ACSS conductor
27	-The Insulators and associated conductor hardware will be replaced
	-The existing structures are assumed to have adequate strength to support the new conductors
	-The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
	Cricket Valley to Long Mountain line upgrade: The length of the re-conductor between Cricket Valley and the NY/CT border is 3.3 miles and will remove the existing (to be installed on CV project) 2 bundle 795 ACSS conductor and install new 2 bundle Rail 954 ACSS conductor.
	The length of the re-conductor between the NY/CT border and Long Mountain is 6 miles and will remove the existing single 2156 ACSS conductor and install new single Thrasher 2312
28	ACSS conductor.
	-The Insulators and associated conductor hardware will be replaced.
	-The existing structures are assumed to have adequate strength to support the new conductors.
	-The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
29	The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.

ITC T032 (Segment B)

ESTIMATE ASSUMPTIONS & CLARIFICATIONS

- 1 Cost Estimate is based on 2017 rates.
- Construction schedule is in accordance with proposed schedule we have assumed continuous working with no breaks in the schedule. Six months have been added to the construction schedule for start up and close out works and assisting in pre-construction activities (i.e. permitting activities, material procurement etc.).
- We have assumed a typical work week of five-(5) days per week at ten-(10) hours per day (5 x 10 hour days).
- 4 All labor rates and benefits used for estimating purposes are taken from IBEW Local 1249 working agreement as updated 5-8-2017.
- We have assumed that the Access Road included in Developer Estimate will be Type 1 Gravel Type. 20% of the total length of the line is assumed to use Type 1 Gravel road and 80% of the line length access to be used wood matting. In addition 75 feet of wood matting is included from the access matting to the work pad area matting. The estimate also include 5,000 square feet of wood matting for each structure work area within the ROW. For the ground restoration (seed, straw and woven mat), 20% of the work pad area included.
- Costs will vary for handling and disposal of contaminated spoils, depending on type of contaminants and availability / location of the appropriate tipping facility. Since there is not enough information to provide a quantified estimate for this item, allowance is included in the contingency monies.
- Costs have been developed based on historical data from Projects of a similar nature (AACE Class 5 and 4 Estimating Practices). We have not engaged any subcontractors for formal quotes.
- 8 Foundation rates include supply and installation of materials. Drilled Pier rates include supply and testing of concrete, rebar cage and the use of temp or permanent casing.
- 9 A Contractor Mark-Up (OH&P) of 15% has been included in the Total section.
- 10 We have assumed that all project details provided are accurate unless noted otherwise.
- 11 Any SUF pricing includes 35% to cover Contractor markup (15%) and contingency (20%)
- 12 A contractor allowance of 1% for mobilization and demobilization has been included in the total section.
- A contractor allowance of 4.184% for project management and staffing has been included in the total section. This also includes agricultural inspector, engineering inspector, safety inspector, compliance inspector, environmental inspector, and SWPP inspector.
- An allowance of 1% for Utility PM and Project Oversite staffing has been included in the total section.
- 15 A contractor allowance of 1% for site accommodation, facilities, and storage has been included in the total section.
- 16 An allowance of 5% for transmission design and engineering has been included in the total section.
- 17 An allowance of 8% for substation design and engineering has been included in the total section.
- 18 An allowance of 0.7% for survey and staking of the transmission line and substation layout has been included in the total section.
- An allowance of 0.3% for LIDAR of the transmission line has been included in the total section.
- 20 An allowance of 3.75% for substation testing and commissioning has been included in the total section.
- An allowance of \$20,000.00 per circuit for transmission line testing and commissioning has been included in the total section.
- 22 New York state sales tax of 8% is included in all material pricing.
- 23 An allowance of 1.5% for insurance is included in the DPS sheet.
- Rock excavation not provided in proposal foundation data, all structures are drilled shaft foundation, rock excavation assumed same guantity as in National Grid's proposal.
- 25 An additional Quantity of 5% have been added to conductors, OPGW, & OHSW for sag and jumpers.
 - Cricket Valley to Long Mountain line upgrade: The length of the re-conductor between Cricket Valley and the NY/CT border is 3.3 miles and will remove the existing (to be installed on CV project) 2 bundle 795 ACSS conductor and install new 2 bundle Rail 954 ACSS conductor.
 - -The length of the re-conductor between the NY/CT border and Long Mountain is 6 miles and will remove the existing single 2156 ACSS conductor and install new single Thrasher 2312 ACSS conductor.
- -The Insulators and associated conductor hardware will be replaced.
 - -The existing structures are assumed to have adequate strength to support the new conductors.
 - -The estimate is a rough order of magnitude estimate as no engineering was performed and SECo did not have access to record drawings.
- 27 The SUF estimates for the stations are rough order of magnitude estimates. No engineering was performed and SECo did not have access to record drawings.
