# Market Performance Highlights for November 2007

- LBMP for November is \$67.46/MWh, down from \$73.49/MWh in October 2007.
  - Average monthly cost is \$71.37/MWh, down from \$77.24/MWh in October 2007.
  - Day Ahead and Real Time LBMPs have decreased from October 2007.
- Average daily sendout is 428GWh/day in November, down from 436GWh/day in October 2007 and higher than the November 2006 amount of 416GWh/day.
- Fuel prices are up this month.
  - Kerosene is \$20.28/mmBTU, up from \$17.93/mmBTU in October.
  - No. 2 Fuel Oil is \$18.48/mmBTU, up from \$16.28/mmBTU in October.
  - No. 6 Fuel Oil is \$12.63/mmBTU, up from \$11.46/mmBTU in October.
  - Natural Gas is \$7.81/mmBTU, up from \$7.15/mmBTU in October.
- Uplift is lower this month relative to October 2007.
  - Uplift (not including NYISO cost of operations) is \$1.26/MWh, down from \$1.62/MWh in October 2007.
  - Total uplift (Schedule 1 components including NYISO Cost of Operations) decreased from \$31.2 million in October 2007 to \$25.6 million in November 2007.
- Price corrections continue to be at low levels.

**Daily NYISO Average Cost/MWh (Energy & Ancillary Services)\***  
**2006 Annual Average \$76.45/MWh**  
**November 2006 YTD Average \$77.21/MWh**  
**November 2007 YTD Average \$78.70/MWh**

\* Excludes ICAP payments.

## NYISO Dollar Flows - Uplift - OATT Schedule 1 components

DAM Contract Balancing amounts are for payments made to generating units to make them whole for being dispatched below their Day-Ahead schedule, as a result of out-of-merit dispatches.  
 DAM Bid Production Cost Guarantees for Virtual Transactions are included in the chart and are shown from the inception of Virtual Transactions. These values are small and cannot be identified on the chart.  
 DAM residuals are revenue charged or returned to customers due to the under or over collection of funds.

Report Overview

All reliability metric performances are normal. Frequency threshold exceedences primarily attributed to interconnection system events outside the NYISO.

System State Declarations

-  ACE Threshold Exceedance
-  Adverse Operating Conditions
-  Communications Degradation
-  Frequency Threshold Exceedance
-  Interface Transfer Limit (IROL) Exceedance
-  Neighboring System in Voltage Reduction
-  Operating Reserve Deficiency
-  Thermal Rating Limit (SOL) Exceedance
-  Voltage Rating Limit (SOL) Exceedance

NERC IROL/SOL Violations

-  NERC SOL - Thermal Rating Limit
-  NERC SOL - Voltage Rating Limit
-  NERC IROL - Interface Transfer Limit

Definitions

**Alert State Declarations:**

The number and causes of Alert State declarations reflect system operating conditions beyond thresholds associated with Normal and Warning States. Declaration of the Alert State allows the NYISO to take corrective actions not available in the Normal and Warning States.

**Major Emergency State Declarations:**

The number and causes of Major Emergency State declarations reflect system operating conditions beyond thresholds associated with the Alert State. Declaration of the Major Emergency State allows the NYISO to take aggressive corrective actions not available in the Alert State.

**NERC IROL/SOL Violations:**

The number and causes of NERC IROL/SOL violations reflect system operating conditions beyond thresholds associated with applicable NERC reliability standards. The NERC IROL/SOL violation thresholds are higher than those defined for the Major Emergency State.

Report Overview

All reliability metric performances are normal.

**Control Performance**

- CPS-1
- CPS-2
- CPS Limit

**Reserve Activations**

- ACE Not Normal
- NYCA Resource Loss < 500 MW
- NYCA Resource Loss > 500 MW
- Shared Activation of Reserves

**NERC CPS/DCS Violations**

- NERC CPS-1 - Balancing Standard
- NERC CPS-2 - Balancing Standard
- NERC DCS - ACE Recovery

Definitions

**Control Performance Standards:**

The values of NERC Control Performance Standards (CPS-1 and CPS-2) are indicators of the NYISO Area resource and demand balancing performance.

**Reserve Activations:**

The number and causes of NYISO Reserve Activations are indicators of the need to respond to unexpected operational conditions within the NYISO Area or to assist a neighboring Area (Shared Activation of Reserves) by activating an immediate resource and demand balancing operation.

**NERC Control Performance Standard/Disturbance Control Standard (CPS/DCS) Violations:**

The number and causes of NERC CPS/DCS violations reflect system operating conditions beyond thresholds associated with applicable NERC reliability standards.

Description		Status and Milestone Deliverables
<b>Energy Marketplace Product Enhancements</b>		
A767	MIS Enhancements: Comprehensive Bid Management System	<p><b>Status:</b> The first phase of this multi-phase project was successfully deployed into production on January 16, 2007. The features that were deployed was the replacement of the new load and virtual bidding forms on the new architecture; performance assessment and post-production monitoring is ongoing to ensure desired results were achieved. The phase of the project, with a scope of replacing the transaction bidding interfaces as well as the Upload / Download mechanisms for both load and transactions, was deployed successfully to production on October 10, 2007. Successful MP testing sessions were held in May and August.</p> <p><b>Deliverables:</b> This project will upgrade the web-based application structure to replace overlapping applications by allowing common components to support current application functionality and future application functional growth. One of the deliverables will be the implementation of a more flexible and reliable application infrastructure for the market applications. This project is part of a multi-year effort that will lead to a replacement of the Market Information System (MIS) and related bidding and scheduling applications. This project will continue into 2008.</p>
A871	Enhanced Price Validation	<p><b>Status:</b> The first phase of this multi-phase project was successfully deployed into production on March 1, 2007. The features deployed will enable the Price Validation team to more effectively track, report, and manage price corrections and reservations. The second phase of the project is comprised of three tracks of functionality. Two of the three tracks deployed successfully on December 4<sup>th</sup>, the remaining track is in the testing phase and will deploy in the first quarter of 2008. Requirements processes for phase 3 have initiated in parallel with the testing for Phase 2.</p> <p><b>Deliverables:</b> The NYISO has investigated all known causes of pricing errors, and has taken a systematic approach to determine features and functions that can significantly enhance the price validation process. Product enhancements are proposed to implement proactive price monitoring, improved price reservations, and enhanced price corrections. The project will entail a multi-phase, multi-year implementation of tools to enhance the price monitoring, reservation, and correction processes for the NYISO markets. This project will continue into 2008.</p>
A922	PJM Proxy Bus Pricing	<p><b>Status:</b> This project has completed the requirements, design, development, and testing phases. Software deployment was made in May 2007 with the features deactivated pending regulatory approval. FERC approval was received in early June and the final configuration steps were taken to complete the implementation.</p> <p><b>Deliverables:</b> Design and implementation of changes to the price calculation methodology at the PJM proxy. The change is anticipated to make the pricing at the PJM interface more consistent with actual system operation and is design to increase trading at that proxy.</p>
A921	Transmission Constraint Pricing	<p><b>Status:</b> This project has completed the requirements, design, development, and testing phases. Software deployment was made in May 2007 with the features deactivated pending regulatory approval. FERC approval was received in early June and the final configuration steps were taken to complete the implementation.</p> <p><b>Deliverables:</b> Design and implementation of a Transmission Demand Curve methodology that would limit the impact on prices due to severe shadow costs as a result of transmission constraints. The change is anticipated to eliminate a certain form of price corrections.</p>

Description		Status and Milestone Deliverables
<b>Auxiliary Market Product Enhancements</b>		
A906	ICAP Auction Automation – Phase II	<p><b>Status:</b> This project has completed the requirements, design, development, and testing phases. Software deployment was made on October 16, 2007.</p> <p><b>Deliverables:</b> Following the implementation of the first phase of the ICAP Auction Automation software project, a certain subset of enhancements are planned to complete the full suite of planned features. The scope of the next phase of the ICAP Auction Automation project will target the automation of certain administrative functions.</p>
A857	Demand Response for Ancillary Services	<p><b>Status:</b> This project has completed the requirements process and has started development; implementation targeted for early 2008. Technical design for the end-state solution had proven more difficult than expected, ultimately making meeting the commitment for a 4<sup>th</sup> quarter 2007 delivery impossible. The current proposal would help mitigate the political risk of missing the commitment by delivering more functionality than originally offered.</p> <p><b>Deliverables:</b> As directed by the FERC, execution of software changes that will permit the integration of demand side resources (“DSRs”) into the NYISO real-time ancillary services and energy markets.</p>
<b>TCC Marketplace Product Enhancement</b>		
A796	TCC Auction Automation – Phase 2	<p><b>Status:</b> This project is in a detailed requirements and design phase. An inter-departmental team has been formed to document the detailed use cases necessary to automate the database management functions. The design milestone defined by completion and approval of the detailed use cases was achieved on schedule in August 2007. Recent resource constraints on the part of the business owner (Aux. Market Operations) had caused significant schedule risk, but mitigation steps have enabled the project to get back on schedule.</p> <p><b>Deliverables:</b> Following the implementation of the first phase of the TCC Auction Automation software project (Automation of the Awards Process), following phases will deliver the Database / Inventory Automation (Phase 2) and Bidding (Phase 3) functionality required to fully automate the TCC markets. An iterative development approach will be utilized to provide incremental functional deliverables starting in the second half of 2007, but full development of this phase will not be complete until third quarter 2008. Phase 3 is scheduled to follow in late 2008.</p>
<b>Operations and Reliability Product Enhancements</b>		
A916	HQ Netting	<p><b>Status:</b> This project has been completed. Approval has been achieved from Market Participants on the necessary rule changes. Final software deployment and activation was performed on schedule at the end of June 2007.</p> <p><b>Deliverables:</b> Implementation of a second proxy bus definition at the Hydro Quebec interface. The software would establish a separate proxy bus for imports and wheel through transactions. This feature is expected to increase the volume of trades at the HQ interface.</p>

Description		Status and Milestone Deliverables
A843	Integration of OOM and SRE Applications	<p><b>Status:</b> This project is in the software design phase; detailed requirements specification has been completed on schedule to meet the 2<sup>nd</sup> quarter commitment; software design to has started with a planned implementation in 2008.</p> <p><b>Deliverables:</b> Replacement of the Out of Merit (OOM) and Supplemental Resource Evaluation (SRE) applications used by the control room floor. These applications are currently built upon an unsupported platform (Oracle Forms) and can be design to be more efficient and error prone if they are consolidated into a single suite of application functions.</p>
A862	Controllable Tie Line Additions: Dennison-Cedars Line	<p><b>Status:</b> This project is an application of the Generic Controllable Tie Line logic deployed for the Cross Sound Cable n 2005. ABB Ranger and MIS model maintenance tasks required for deployment were successfully deployed, on schedule, in October 2006. Approval has been achieved from Market Participants on the necessary rule changes. Operational protocols have been developed for implementation, and all necessary regulatory approvals have been received. Commencement of operations as a controllable line is on hold pending resolution of facility owner concerns regarding DOE obligations / liabilities from the export permit.</p> <p><b>Deliverables:</b> The Dennison-Cedars Line is a controllable tie line between Zone D in NY and HQT. The project, when implemented, will support both import and export transactions independent of the existing NY/HQT interconnection.</p>
A862	Controllable Tie Line Additions: 1385 Line	<p><b>Status:</b> This project is an application of the Generic Controllable Tie Line logic deployed in 2005. ABB Ranger and MIS model maintenance tasks required for deployment were successfully deployed, on schedule, in October. Final implementation steps were performed in June.</p> <p><b>Deliverables:</b> The 1385 Line is a controllable tie line between Long Island and New England. The project, when implemented, will support both import and export transactions independent of the existing NY/NE interconnections.</p>
A862	Controllable Tie Line Additions: Project Neptune Line	<p><b>Status:</b> This project has been completed. ABB Ranger and MIS model maintenance tasks required for deployment were successfully deployed, on schedule, in October. Approval has been achieved from Market Participants on the necessary rule changes, and regulatory approval has been received from FERC. Final implementation steps were performed in June.</p> <p><b>Deliverables:</b> The Neptune Line is an HVDC line between Long Island and New Jersey. The project, when implemented, will provide an additional external proxy bus on Long Island that is scheduled and priced independent of other external proxies. As a merchant transmission facility, the Neptune Line may require special bidding protocols similar to those that apply to the Cross Sound Cable. Actual requirements beyond the Generic Controllable Tie lines logic are being defined through the concept development effort.</p>

Description		Status and Milestone Deliverables
<b>Financial Service Product Enhancements</b>		
A845	Settlement System Replacement (SSR) / Billing Engine	<p><b>Status:</b> This project has completed the final testing phases. An iterative development approach has been employed where groups of the billing rules are being ported to the new engine in phases. The project schedule had slipped from the original schedule due to a longer than expected development cycle for the system framework and infrastructure build-out, as well as planned scope expansion resulting from settlements modifications driven by other business critical projects. Certification of the billing software (Project A885) was a necessary prerequisite for deployment of this project, but was performed on schedule. The software changes necessary to operate the new billing engine was deployed to production in June, but activation had been delayed in order to allow MP system changes required to adapt to minor data formatting changes in the Decision Support System (DSS). The software was activated successfully on August 9.</p> <p><b>Deliverables:</b> Implementation of a rules-based design as a replacement to the settlements engine in the Billing and Accounting System (BAS). Project will leverage technology investment made as part of the Billing Simulator and will lead to a higher performing calculation engine for billing, as well as a more flexible architecture for managing future changes to the settlements processes. This project is part of a multi-year effort to replace the entire billing system including, the invoicing components, web-based reconciliation, and integration of certain credit functions. This project is scheduled to continue into 2008.</p>
A885	Settlements Rules Engine Certification	<p><b>Status:</b> The joint NYISO and PA Consulting project team has finalized settlement tariff rule certification. The process entailed the development of a reduced model against which the settlement rules are being tested. A limited number of variances had been identified, but significant schedule / compliance risks were not detected. A detailed internal review of all settlement use cases identified the need to make certain tariff clarifications in order to remove any ambiguity between the language in the tariff and rules implemented in software. Regulatory processes to support this certification have been completed; the certification of the settlements engine has been received. This project is completed.</p> <p><b>Deliverables:</b> Third party certification (PA Consulting) of the implementation of the rules in the new settlements engine is full compliant with all applicable tariffs. Project is a prerequisite for the Settlements Sys Repl. (SSR) project.</p>
A893	Web Based Reconciliation Replacement	<p><b>Status:</b> This software for the first production deliverable of this project was successfully deployed into production in May. A series of technical conferences had previously been held with Market Participants to capture of the highest priority features needed in the new application, as well as understand the desired feature additions. The schedule for this project was accelerated from the original commitment in order to meet Market Participant expectations. A phased delivery schedule was employed that enabled delivery of critical performance functions in mid-2007, followed by lower priority features later. Market Trails were conducted in late August for the second set of deliverables. The software was deployed to production on schedule on October 10, 2007.</p> <p><b>Deliverables:</b> Following a successful replacement of the settlements engine of the Billing and Accounting System (BAS), the NYISO will continue to leverage the technology investment made as part of that project by replacing the Web Based Reconciliation (WBR) application used to facilitate meter data input to the settlements process. The capabilities of the WBR application are criticized due to their performance as well as query and reporting capabilities. Enhancements to this capability will help support shorter settlement cycles.</p>

Description		Status and Milestone Deliverables
<b>Business Intelligence Product Enhancements</b>		
A849	DSS Pricing and Operational Data Mart	<p><b>Status:</b> This software for delivery of the DSS Pricing Datamart was successfully deployed into product during the last week of March 2007. Market Participant utilization and performance metrics of the new system are being monitored, and user adoption has been very good.</p> <p><b>Deliverables:</b> During recent years, the NYISO has made a significant investment in data warehousing technology through the implementation of the Decision Support System (DSS) to support the NYISO settlements processes. This project will expand the DSS customer base by delivering pricing data that will support the price validation processes and provide greater transparency to the NYISO markets.</p>
<b>Other NYISO Key Projects</b>		
A775	Consolidate NYISO Offices	<p><b>Status:</b> Personnel relocation activities have completed that enabled the NYISO to vacate the Washington Avenue and Wolf Road facilities and fully occupy the 2<sup>nd</sup>, 3<sup>rd</sup> and 4<sup>th</sup> floors of the new Krey Corporate Center (KCC) facility. The migration of the data center to the KCC 2<sup>nd</sup> floor has completed, and the activation of the Alternate Control Center functions at the KCC was completed, on schedule.</p> <p><b>Deliverables:</b> This project seeks to secure ~150,000 square feet of office space to include administrative offices, alternate control center and back-up IT/disaster recovery functionality. Once ready, this facility would enable the migration from former / existing NYISO facilities at Washington Avenue, Wolf Road, and Western Turnpike.</p>
