

ICAP Automation Phase 2 Recommended Tracks

ICAPWG

July 6, 2006

Background

- ◆ Conceptual design of ICAP Automation Phase 2 effort laid out in mid-2005 as a multi-track effort
- ◆ Project reprioritization in Q1-2006 identified initiatives that supplant ICAP Automation resources – no implementation dates currently set
- ◆ NYISO staff and ICAP User Group need to agree on enhancement priorities
- ◆ MP feedback through project prioritization process will influence the timing of future releases

Track 1 - Maintenance and Tracking of SCR and EDRP Resources

- ◆ Maintain and view registration information for RIPs/SCRs and CSPs/EDRP resources
- ◆ Functions include the ability to aggregate individual SCRs into larger MW blocks and add, remove, modify, active and deactivate SCR s and EDRP resources
- ◆ Upload, maintain and view capability of event report data

Track 2 - Calculate, Maintain and View EFORd Information

- ◆ Validate generator performance data submitted in the GADS format
- ◆ Upload/download capability with EFORd calculation tool
- ◆ MP download capability
- ◆ Seasonal EFORd calculations by generator/resource type

Track 3 - Upload and Copy Bid/Offer Information for Certification

- ◆ Download bids/offers for all bid/offer months in an Auction
- ◆ Upload bids/offers for all bid/offer months in an Auction
- ◆ Allow MPs with bilateral transactions to enter the required information via upload

Track 4 - Administer Import Rights and UDRs

- ◆ Allow NYISO Staff to modify and delete Import Rights, for reasons specified in the Services Tariff and the ICAP Manual, during time period specified in the Event Calendar
- ◆ Provide public view screen indicating available Import Rights for MP review
- ◆ Notify MPs when Import Rights have reached limits and when Import Rights have been relinquished
- ◆ Enhanced support for UDRs
