Pricing Example 1: Day Ahead

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | Upper Operating Limit (MW) | | | | | | |
|-----------------------------|------------------------|-------------------------|-------------------------------|--|--|--|--|--|--|
| Generator 1 | \$20 | \$3 | 100 | | | | | | |
| Generator 2 | \$30 | \$2 | 100 | | | | | | |
| Load = 120 MW | | | | | | | | | |
| Reserve Requirement = 50 MW | | | | | | | | | |

| | Total | Energy | Reserve | | Energy Schedule (MW) | Reserve Schedule (MW) | |
|----|-------------------|---------------|-------------------|-------------------|-----------------------------|-------------------------|------|
| | Cost * | (\$/MWh) | (\$/MWh) | Generator 1 | | | |
| | | | | Generator 2 | | | |
| *T | otal Production (| Cost = Energy | Bid*Energy Schedu | le + Reserve Bid* | Reserve Schedule for both g | generators 🛛 🚝 New York | (ISC |

Pricing Example 1: Day Ahead

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | Upper Operating Limit (MW) | | | | | | |
|-----------------------------|------------------------|-------------------------|-------------------------------|--|--|--|--|--|--|
| Generator 1 | \$20 | \$3 | 100 | | | | | | |
| Generator 2 | \$30 | \$2 | 100 | | | | | | |
| Load = 120 MW | | | | | | | | | |
| Reserve Requirement = 50 MW | | | | | | | | | |

| | Total | Energy | Reserve | | Energy Schedule (MW) | Reserve Schedule (MW) |
|-----|-------------------|---------------|------------------|---------------------|-----------------------------|-----------------------------|
| | Cost* | (\$/MWh) | (\$/MWh) | Generator 1 | 100 | 0 |
| | \$2,700 | \$30 | \$2 | Generator 2 | 20 | 50 |
| *T(| otal Production (| Cost = Energy | Bid*Energy Sched | lule + Reserve Bid* | Reserve Schedule for both g | generators 🛛 👘 New York IS(|

Pricing Example 2: Real Time

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | Upper Operating Limit (MW) | | | | | | |
|-----------------------------|------------------------|-------------------------|-------------------------------|--|--|--|--|--|--|
| Generator 1 | \$20 | \$0 | 100 | | | | | | |
| Generator 2 | \$30 | \$0 | 100 | | | | | | |
| Load = 120 MW | | | | | | | | | |
| Reserve Requirement = 50 MW | | | | | | | | | |

| Total | Energy | Reserve | | | Energy Schedule (MW) | Reserve Schedule (I | MW) |
|-------------------|---------------|------------------|------|----------------|-----------------------------|---------------------|----------|
| Cost* | (\$/MWh) | (\$/MWh) | | Generator 1 | | | |
| | | | | Generator 2 | | | |
| otal Production (| Cost = Energy | Rid*Energy Sched | lule | + Reserve Bid* | Reserve Schedule for both a | ienerators 📒 New | Vork ISC |

Pricing Example 2: Real Time

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | Upper Operating Limit (MW) | | | | | | |
|-----------------------------|------------------------|-------------------------|-------------------------------|--|--|--|--|--|--|
| Generator 1 | \$20 | \$0 | 100 | | | | | | |
| Generator 2 | \$30 | \$0 | 100 | | | | | | |
| Load = 120 MW | | | | | | | | | |
| Reserve Requirement = 50 MW | | | | | | | | | |

| | Total | Energy | Reserve | | | Energy Schedule (MW) | Reserve Sch | edule (MW) |
|----|-------------------|---------------|-----------------|------|----------------|-----------------------------|-------------|---------------|
| | Cost* | (\$/MWh) | (\$/MWh) | | Generator 1 | 100 | C |) |
| | \$2,600 | \$30 | \$0 | | Generator 2 | 20 | 50 | 0 |
| *T | otal Production (| Cost = Energy | Bid*Energy Sche | dule | + Reserve Bid* | Reserve Schedule for both g | generators | 🖶 New York IS |

Pricing Example 3: RT with Constraints

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | UOL (MW) | Max Reserve Schedule (MW)* |
|-------------|------------------------|-------------------------|-------------|-------------------------------|
| Generator 1 | \$20 | \$0 | 100 | 50 |
| Generator 2 | \$30 | \$0 | 100 | 40 |
| Load = 12 | 0 MW | *Based u | pon gene | erator response rate |

Reserve Requirement = 50 MW

| Total | Energy | Reserve | | Energy Schedule (MW) | Reserve Schedule (| MW) |
|-------------------|---------------|-------------------|--------------------|-----------------------------|--------------------|-------------------|
| Cost* | (\$/MWh) | (\$/MWh) | Generator 1 | | | |
| | | | Generator 2 | | | |
| *Total Production | Cost = Energy | Bid*Energy Schedu | Ile + Reserve Bid* | Reserve Schedule for both g | generators 🛛 🖶 Nev | <i>N</i> York ISO |

Pricing Example 3: RT with Constraints

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | UOL (MW) | Max Reserve Schedule (MW)* |
|---------------|------------------------|-------------------------|-------------|-------------------------------|
| Generator 1 | \$20 | \$0 | 100 | 50 |
| Generator 2 | \$30 | \$0 | 100 | 40 |
| Load = 120 MW | | *Based u | pon gene | erator response rate |

Reserve Requirement = 50 MW

| Total | Energy | Reserve | | Energy Schedule (MW) | Reserve Schedule (MW) |
|------------------|-----------------|-----------------|---------------------|-----------------------------|-------------------------------|
| Cost* | (\$/MWh) | (\$/MWh) | Generator 1 | 90 | 10 |
| \$2,700 | \$30 | \$10 | Generator 2 | 30 | 40 |
| *Total Productio | n Cost = Energy | Bid*Energy Sche | dule + Reserve Bid* | Reserve Schedule for both g | generators 🛛 🛛 😓 New York IS(|

Pricing Example 4: RT with Constraints

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | UOL (MW) | Max Reserve Schedule (MW)* |
|-------------|------------------------|-------------------------|-------------|-------------------------------|
| Generator 1 | \$20 | \$0 | 100 | 50 |
| Generator 2 | \$30 | \$0 | 100 | 40 |
| Load = 12 | 0 MW | *Based u | pon gene | erator response rate |

Reserve Requirement = 51 MW

| Ţ | otal | Energy | Reserve | | Energy Schedule (MW) | Reserve Schedule (M) | ∕⁄) |
|------|-----------------|---------------|-------------------|-------------------|-----------------------------|-----------------------|---------|
| | Cost* | (\$/MWh) | (\$/MWh) | Generator 1 | | | |
| | | | | Generator 2 | | | |
| *Tot | al Production (| Cost = Energy | Bid*Energy Schedu | le + Reserve Bid* | Reserve Schedule for both g | generators 🛛 🖶 New Ye | ork ISC |

Pricing Example 4: RT with Constraints

| | Energy Bid (\$/MWh) | Reserve Bid (\$/MWh) | UOL (MW) | Max Reserve Schedule (MW)* | |
|-----------------------------|------------------------|-------------------------|-------------|-------------------------------|--|
| Generator 1 | \$20 | \$0 | 100 | 50 | |
| Generator 2 | \$30 | \$0 | 100 | 40 | |
| Load = 12 | 0 MW | *Based u | pon gene | erator response rate | |
| Reserve Requirement = 51 MW | | | | | |

| Total | Energy | Reserve | | | Energy Schedule (MW) | Reserve Schedule (MW) |
|---|----------|----------|--|-------------|----------------------|-----------------------|
| Cost* | (\$/MWh) | (\$/MWh) | | Generator 1 | 89 | 11 |
| \$2,710 | \$30 | \$10 | | Generator 2 | 31 | 40 |
| Total Production Cost = Energy Bid*Energy Schedule + Reserve Bid*Reserve Schedule for both generators 👘 New York IS | | | | | | |

Our mission, in collaboration with our stakeholders, is to serve the public interest and provide benefit to consumers by:

- Maintaining and enhancing regional reliability
- Operating open, fair and competitive wholesale electricity markets
- Planning the power system for the future
- Providing factual information to policymakers, stakeholders and investors in the power system
