- **Wk of Dec 29**      **NYISO distributes Final Drafts of all documents**
  
- **Wk of Jan 5**      **Final review/comments on all documents**

# “Deliverability Issue”

- **Several market participants have expressed an interest in moving to a deliverability criteria in New York in the context of the FERC Interconnection Compliance Filing**
- **Various proposals have been suggested**
  - *Adopt the FERC “pro-forma” approach*
  - *Adopt the “PJM model” or its NY equivalent*
  - *Institute deliverability within current NYISO ICAP zones*
- **Any deliverability criteria would be a fundamental change in the NYISO’s current Minimum Interconnection Standard & UCAP Market**
  - *As well as a potentially significant impact on the NYISO’s existing resource adequacy methodology*

## **“Deliverability Issue” (cont’d)**

- **It is the NYISO’s position that the FERC Interconnection Order does not require independent entities to adopt two interconnection products**
  - *Stakeholders disagree on this issue*
  - *In any event, such a fundamental criteria change could not be accomplished in time for the Jan 20<sup>th</sup> Compliance Filing*
  - *The NYISO must have an implementable interconnection process in place on Jan 20<sup>th</sup>*
- **The NYISO proposes to separate this discussion from the Interconnection Compliance Filing process**
  - *NYISO will indicate, in the filing letter, that an effort is underway to review a deliverability standard*

## **“Deliverability Issue” (cont’d)**

- **The NYISO will work with stakeholders to analyze the implications of moving towards a deliverability requirement for future interconnections**
- **It is recommended that the IITF be the stakeholder forum for these discussions**
  - *This is appropriate since the IITF was originally formed to represent both BIC and OC interests related to interconnection issues*
- **There should be a liaison established with the ICAP WG regarding this issue**
