## Proposal for Implementing DADRP Design Criteria

- Expand customer access DADRP given limited bus availability
- Limit bidding rules to existing NYISO capabilities
- Employ settlements procedures consistent with existing NYSIO capabilities

## Proposal for Implementing DADRP Approach

- **Develop standardized products**
- Create superzones for bidding
- Create super zone scheduling coordinators

### **Create Standardized Products**

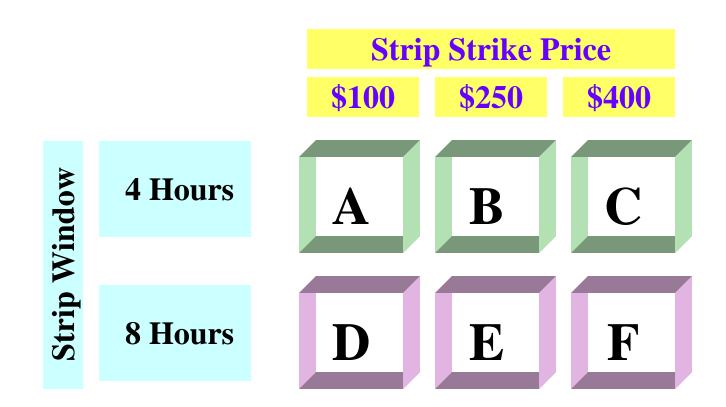

#### **Objective**

Define products that maximize the benefits to customers from DADRP bidding, subject to SCUC bidding restrictions and ISO settlement provisions.

#### **Approach**

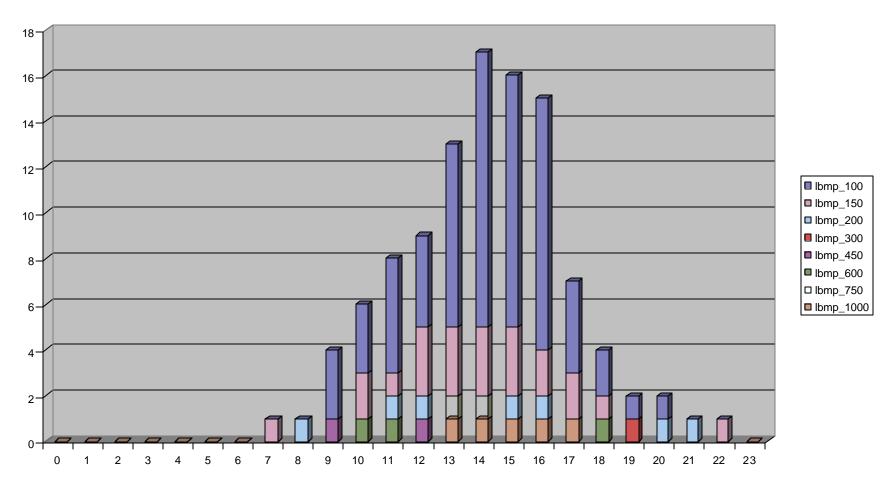

- Standardize the definition of a strip
- Standardize strike prices for strips
- Standardize curtailment product cost guarantee

## **Create Standardized Products**

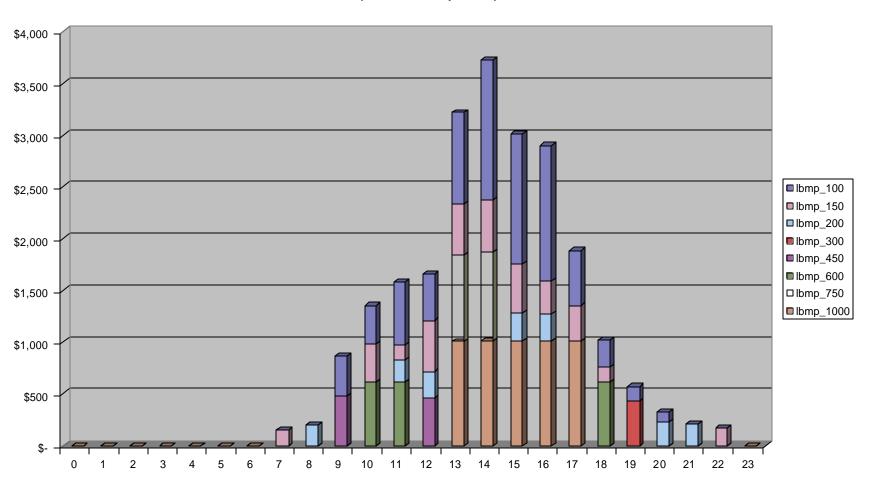

# New York Zone – Strike Price Frequency

NYC Zone: Frequency of DAM LBMP (June 2000 - Sept. 2000)

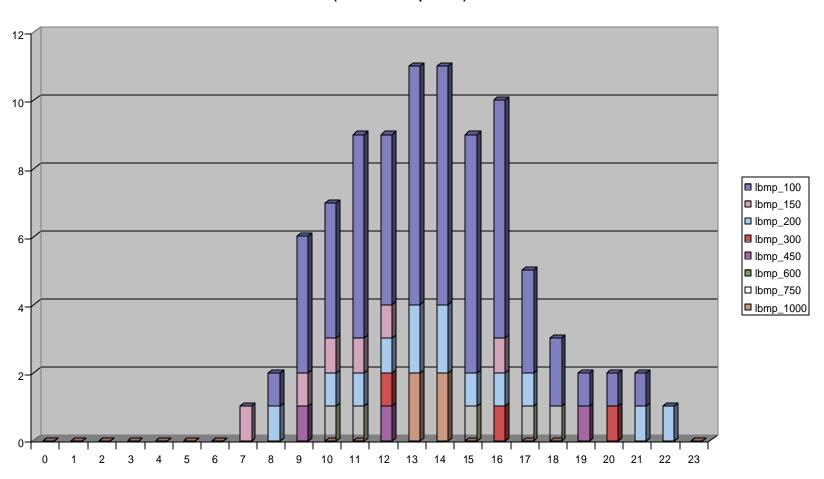

## **New York Zone - LBMPs**

NYC Zone: Potential Revenue based on DAM LBMPs (June 2000 - Sept. 2000)

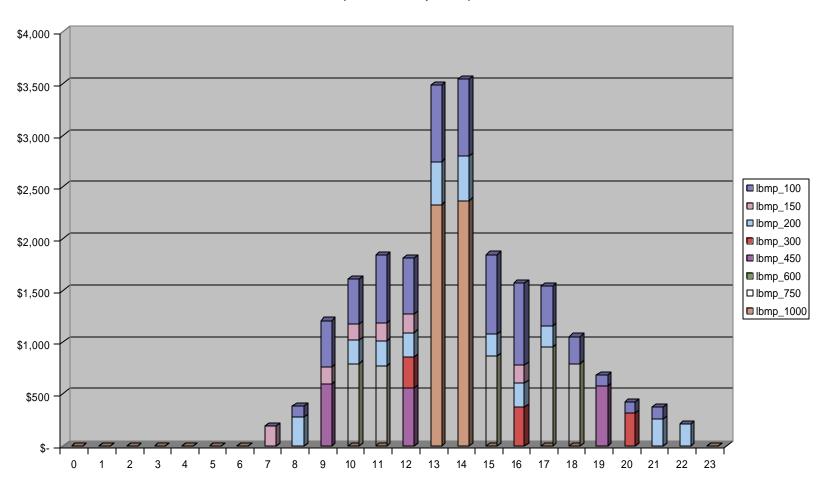

## **Capital Zone Frequencies**

Capital Zone: Frequency of DAM LBMP (June 2000 - Sept. 2000)

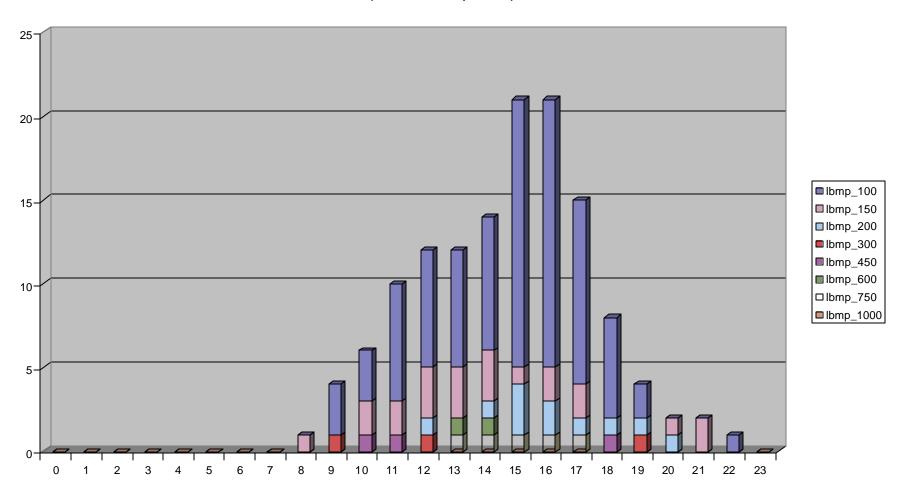

## **Capital Zone - LBMPs**

Capital Zone: Potential Revenue based on DAM LBMPs (June 2000 - Sept. 2000)

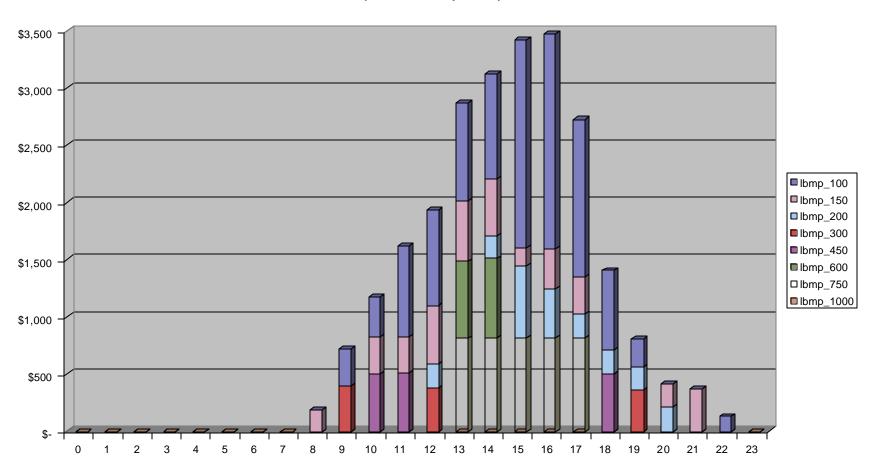

# LI Zone - Frequencies

Long Island Zone: Frequency of DAM LBMP (June 2000 - Sept. 2000)

## LI Zone - LBMPs

Long Island Zone: Potential Revenue based on DAM LBMPs (June 2000 - Sept. 2000)

# Choosing a Window and length for Strips

Zone	Best 4 Hour	Best 8 Hour	8 Hour p.m. only	Total Potential Yield
L.I.	53%	83%	81%	\$24,352
NY City	56%	85%	79%	\$22.867
Capital	49%	79%	71%	\$21,779
West	56%	93%	83%	\$ 3,349

**LBMPs for June – September 2000** 

# **Choosing a Window**

	Best 4-hour window	
Zone		
L.I.	noon – 4:00	
NY City	1:00 - 5:00	
Capital	1:00 - 5:00	
West	2:00 - 6:00	

**LBMPs for June – September 2000** 

# Curtailment Production Cost Guarantee

- Bids can include curtailment production cost guarantee
- Super zone SCs responsible for creating aggregate guarantee and settling NYISO payments with aggregated bidders

# **Block Bidding**

- o Block bids could be submitted by SC
- o NYISO would dispatch using existing procedures
- o Super zone SCs would be responsible for settling with individual bidders

# Reduce the number of distinct bidding entities

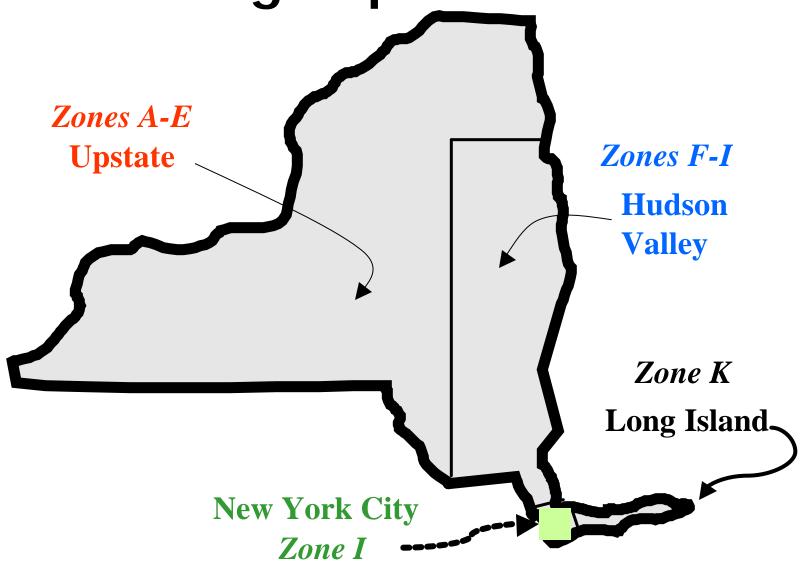

#### **Objective**

Create a geopolitical characterization of the NYCA that allows for aggregation of DADRP bids without compromising the inherent transmission constraints that influence DAM prices

#### Recommendation

Combine existing zones to create three superzones

**Bidding Super Zones** 

# **Allocating Busses**

Super Zone	Product Busses	Floating Busses	Total Busses
L.I.	6	6	12
NY City	6	6	12
Hudson	6	2	8
Upstate	6	2	8
TOTAL	24	16	40

NYISO would allocate remaining busses to Super Zones. Super Zones can turn back unneeded busses for reallocation.

# Create Superzone Curtailment Bid Scheduling Entity

#### **Objective**

Centralize bidding and DADRP settlement functions to accommodate individual customer strip aggregation of bids.

#### Recommendation

LSE's in each superzone should create an entity responsible for coordination of daily bid aggregation and submission and routine settlements

## Roles and Responsibilities

#### **SZ LSE's Collectively**

- **Charter contract for Super Zone SC**
- **Establish rules and procedures**
- Set charges and fees
- Monitor activities
- One LSE acts as designated bidder

## Roles and Responsibilities

### **SZ LSE's Individually**

- File and implement tariffs
- **Market programs**
- Subscribe customer through NYISO
- **Register participants with SC**
- Make distributions to participants, collect penalties

## Roles and Responsibilities

**SZ Scheduling Coordinator** 

- Collects bids, performs aggregations
- Submits bids through DLSE, communicates results
- Collects metered compliance data
- Calculates CBLs and determines compliance
- **Submits settlement reports to LSE**
- Collects program evaluation data for LSE
