

Congestion Impact Calculation Update

NYISO ESPWG
March 29, 2004

3/25/04

Jim Mitsche
Boris Gisin
Manos Obessis

Current Tasks

First Priorities

- 2003 Congestion Impact Calculation
- Align SCUC and PROBE Modeling
- Document Process and Results Interpretation
- Collect 2004 Data

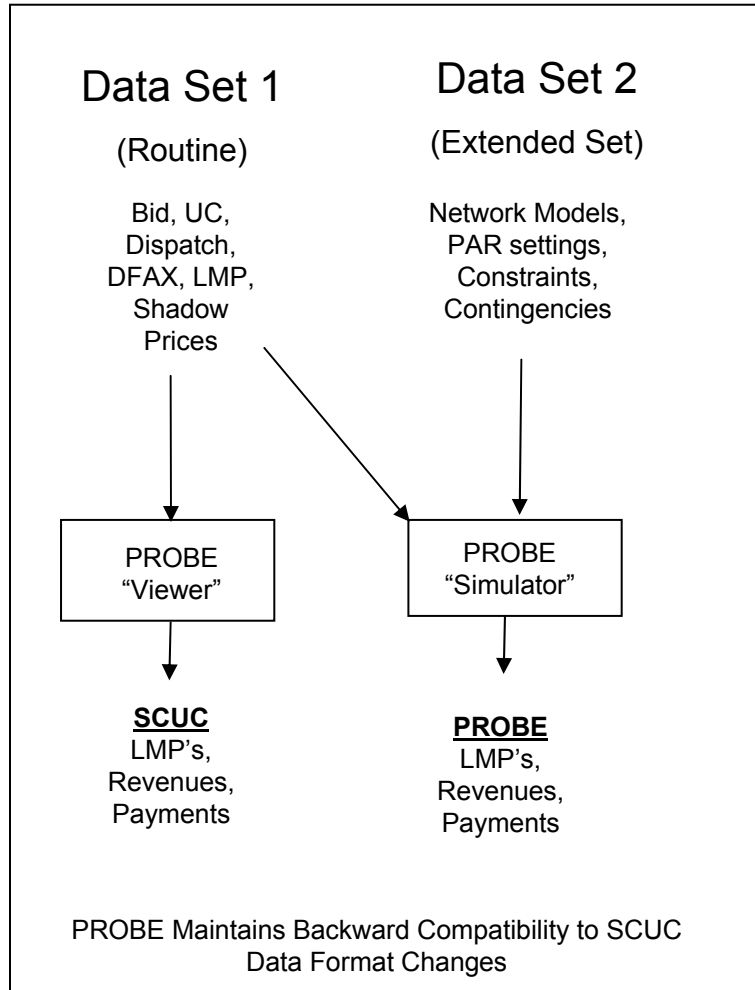

Next Priorities

- Develop Automated SCUC – PROBE Results Comparison
- Automate Calculation Process
- Report Metrics Monthly Going Forward

Data

Data Needs

Data Status

- 2003
 - Set 1 Data Has Been Extracted and Validated for the Entire Year (3+ GB)
 - Set 2 Data is Unavailable for 2003
- 2004
 - Data Sets 1 and 2 Received for Jan and Feb 2004. Awaits Checking (2GB / mo)
 - Daily Storage of Both Datasets Now Routine
 - Weekly Analysis Anticipated

Calculation

- 2003
 - Constrained Results Complete
 - LMP's Revenues, market details available and summarized for each 2003 hour
 - Unconstrained Results Using "PROBE Lite" Now in Debug Stage
 - 7 hours calculation time
 - 5 Issues Need to Be Decided
 - TCC Allocation by Zone
 - Handling Daylight Savings Time Shift Days
 - What Adjustments for Unusual Events, Storm Watch, etc.? When and How?
 - Combine Results for Parallel Monitored Elements ?
 - How to Allocate Energy Cost Change From Constrained – Unconstrained to the Constraints
- 2004
 - First Critical Task – Data Validation

PRELIMINARY 2003 Results

Congestion Payments ONLY

PRELIMINARY RESULTS as of 3/25/04
 New York Zonal and State Congestion Payments 2003

Zone	Zone Name	Congestion Payments	TCC Hedge	Unhedged Congestion Payments
A	WEST	-\$322,198	\$3,005,109	-\$3,327,307
B	GENESE	\$1,504,921	\$19,754	\$1,485,167
C	CENTRL	\$1,694,567	\$4,134,945	-\$2,440,378

PRELIMINARY 2003 Results

Congestion Payments ONLY

PRELIMINARY 2003 Results

Congestion Payments ONLY

Issue 1: Zonal Allocation

How To Allocate TCC to Zones?

- Only POI, POW, MW, and LMP's are Known
- $TCC \text{ Payment} = LMP_{\text{Cong}_{PV}} - LMP_{\text{Cong}_{\text{Indep}}}$
- All TCC Payment Assumed to Go to Load
- Which Zone Gets the Payment?
 - Option 1 Credit to Both POI and POW Zone (Problem: Double Counting)
 - Option 2 Credit Half Each to POW and POI Zone (Problem: Why Should Lower Cost Zone Benefit?)
 - Option 3 **RECOMMENDED** - Credit to the Zone With the Higher LMP

Issue 2: Handling Daylight Savings Time Shift Days

- 4/6/03 had 23 hours; 10/26/03 had 25 Hours
- Handling in PROBE Would Take Too Much Development Time for Now
- **RECOMMENDED** Approach for 2003 – Use the Results for the Previous Day
- Address 2004 in the Future

Issue 3: Adjusting 2003 Results

Why ?

- For 2003, The processing is only of SCUC Results, so no adjustments for SCUC – PROBE misalignment are needed
- Desire to Identify and Segregate
 - “Unusual Events”
 - Impact of Reliability Operating Procedures (e.g. storm watch)
- What Adjustments?
- Who Decides ?
- When Needed ?

Issue 3: Results Adjustment Approaches

- Ignore or Separately Report “Unusual Hours” or Days, Maintenance Contingencies
 - Easy
 - Problem: Obscures Congestion that Would have Occurred Even Without the “Unusual Events”
- Ignore Some Contingencies and Rerun PROBE
 - Likely Doable, Needs Research
- Rerate Constrained Facilities
 - Likely Doable, Needs Research
- Adjust Distribution Factors to Represent Network Switching
 - May Not Be Feasible

Issue 4: Combining Parallel Monitored Elements

- During the Year Several Parallel Monitored Elements Had Congestion On Different Days
 - Examples
 - Sprainbrook – 49th St. Circuits 1 and 2
 - Rainey – Dunwoodie Circuits 1 and 2
 - Newbridge – EGC Circuits 1, 2, 3
 - Barrett – Valley Stream Circuits 1 and 2
 - Hudson – Jamaica Circuits 1 and 2
 - Northport – Pilgrim Circuits 1 and 2
- Option 1 Report All Monitored Element/Contingency Combinations (Problem: Long and Confusing List)
- Option 2 Report All (Problem: Inconvenient for Seeing the Real Picture)
- Option 3:**RECOMMENDED** Combine “Obvious” Parallel Circuits (Problem: What is “Obvious”)
- Option 4 Combine “Obvious” and “Related” Circuits (Problem: Judgmental)

Issue 5: Congestion Load Payments Impact By Constraint

Load Payments: Difference in (Energy + Losses + Congestion) for Constrained and Unconstrained Cases

Congestion Payments: The Component of LMP Paid Relative to the Marcy Reference Point

- In the Unconstrained Case
 - Energy Cost May Rise
 - Congestion Payments Go to Zero
- Change in (Energy + Losses) Known for State, Allocated to Zone by Given Zonal Factors
- Allocation Factors of (Energy + Losses) Change to Constraints Not Defined
- Suggestion: Allocate Statewide Energy Cost Change to each Constraint in Proportion to the Initial Statewide Congestion Payment in the Constrained Case

Observations and Conclusions

- The Data Collection Process is Getting Well Established and Intense Analysis is Underway (*Thank You NYISO Staff !*)
- The Analysis Process is Very Intense, But the Rewards are Great
 - Unprecedented Views and Analyses of the Market are Now Possible
 - Information Needs to Be Gleaned from the Data
 - Excellent Testbed for Other Analyses is Available with Relatively Small Incremental Effort
- Preliminary Observations from Analysis and Results
 - New York Congestion Payments are Concentrated in Zones J and K
 - Congestion is Fairly Well Hedged (roughly 2/3 of Congestion Payments are hedged)
 - Congestion Occurs throughout the Year In Flashes and at Higher Loads
