

Public Market Data Pricing Versions

In an attempt to increase transparency the Public Market Data will version prices as they would have been seen on OASIS. Each time a new price is presented for a unique market and PTID combination the version of the price will be updated. The new price will be marked as the latest version and the end effective date for the previous price version will be updated.

Version FAQ:

- Version information is easily accessible in the OASIS reports.
- Prices within the Public Market data will be versioned; the latest version is available in the Market Solutions class.
- The Price Version History class contains all versions of prices to enable tracking changes.
- Price Versions increment only when a new price for a point in time and (Zone / Generator or Ancillary Service) combination has been provided to the Data Mart.
- The prices in the Price Version History class will include an object for effective start and end time to indicate when each price was entered and when it was replaced by a later version.
- The Price Versions will be conjoined to correction reasons and methods in future releases of the data mart.
