

Request for BAWG

- To reduce true up risk for non-TO LSEs, we are requesting that the BAWG review the following process changes and report back to BIC with a recommendation by its August 2004 meeting:
 - Process change proposed is that non-TO LSEs would not be subject to any true-ups or other adjustments, other than those for losses and retail Tariff adders, that are due to metering issues in determining sub-zone loads
 - Non-TO LSEs would remain responsible for changes in end user meter reads
 - The TOs, Generators and ISO would work out metering revisions as they would apply amongst those with the meters including any administrative settlement of unresolved metering disputes
