

David

I have been on vacation this past week, but I did not want to miss the deadline to provide comments.

As far as Powerweb Technologies is concerned, we would like to be the enabling technology used to implement the program.

We have the following technologies available today at a very low install cost.

- 1) Real time Metering of Demand over the Internet
- 2) Real time Price Discovery
- 3) Accounting Capabilities to calculate "negaWatts" and funds due participant
- 4) Dispatch control of generators, EMS, AC, and residential thermostats over the Internet

We are currently working closing with another Power Pool to perform similar functions.

I would like to provide your team with an on-line demonstration in the near future. I am also offering a demonstration at our next PRLWG meeting.

Please call me on Monday to discuss.
