

## ***Management Committee***

May 27, 2005 Meeting

Motion - Agenda #02

Motion:

The Management Committee approves revisions to the tariff to allow for modified treatment of 10-Minute Resources in RTS, as previously approved by the Business Issues Committee and presented at the Management Committee meeting of May 27, 2005.

This modification will allow 10-Minute Resources not yet committed, which have met their minimum downtime requirement, to be scheduled and participate in real-time price setting when needed and economic to meet load, subject to reliability considerations associated with unit minimum generation levels.

The MC concurs with the BIC request that the NYISO report on the operation of this functionality, discuss with MSWG the nature of the information to be provided, and discuss opportunities to reduce uncertainties between RTC and RTD.
