Proposed Changes to Day Ahead Demand Response Program

June 4, 2004 Management Committee Meeting

DADRP – Proposed Changes

- Remove sunset date from the DADRP "incentive"
- Conduct annual reviews and recommend changes as appropriate
- Retain current Payment/Credit/Cost Recovery structure
 - DRPs paid as generators based on accepted DA schedules
 - □ Host LSE receives credit equal to DRP payment
 - □ Uplift costs allocated to all benefiting LSEs using existing congestion formula
- Amend the DADRP so as to settle deviations from Day-Ahead schedules at the RT LBMP, consistent with other NYISO markets
 - DRPs to be advised that DADRP is not to be used for virtual bidding, given reduced credit requirements
- Remove the requirement that PSC-certified MDSPs submit meter data.
 - DRPs must identify TO/MDSP supplying data
 - NYISO retains ability to audit meter data
 - Customer registrations must authorize NYISO to access original meter data
- Revise Floor Price
 - □ Charge MMP with reviewing/recommending changes to Floor
 - Move Floor Price from Tariff to DADRP Manual (Changes Require BIC Approval)
 - Increase Floor to \$75 beginning Winter 2004-2005 capability period
 - Explore implementation of different time-of-use (on-/off-peak) floor prices
- Continue to Limit Participation to Curtailable Loads
 - □ Avoid incenting NYISO-visible generators to go "behind the fence"
 - DG units can obtain LBMP by working with LSE using Price Capped Load Bidding
- All Changes to be effective October 31, 2004

DADRP Free Rider Simulation Results

Bid Price	Penalty Rate	Hours Scheduled	MWh Scheduled	MWh Performed	DADRP Payment	DADRP Penalty	Net Participant Payment
\$0	110% of Higher of DAM/RTM	240	576	576	\$34,153	\$0	\$34,153
\$50	Higher of DAM/RTM	156	490	490	\$30,324	\$0	\$30,324
\$75	RTM LBMP	8	36	31	\$2,807	\$283	\$2,524

 At proposed \$75 floor and proposed RTM settlement participant payment for providing something it would have done anyway is reduced by a factor of almost 15

Summer 2003 DADRP Scheduled Bids w/ Alternative Bid Floors

Bid Floor	# Hrs.	Change in		
(\$/MWh)	Scheduled	NSW (\$)		
50	610	-72,271		
75	106	-15,673		
100	27	-4,518		
125	11	-1,180		

- Increase in bid floor has affect of dramatically reducing opportunities for being scheduled, given 2003 LBMPs
- Above \$75 a point of diminishing returns is reached, NSW changes are small, while virtually no bids would be accepted discouraging any participation

Impact of DADRP Floor Price on Net Social Welfare, # Hrs Scheduled
