

# **Installed Capacity Tariff Changes Applicable to certain Hydro and Intermittent Resources**

BIC Meeting  
February 8, 2006

# Overview of Tariff Changes

- ✓ Introduce a new Resource type –
  - *Non-Schedulable Run-of-River Hydro Resources*
- ✓ Unforced Capacity values of Intermittent Power Resources, Non-Schedulable Run-of-River Hydro Resources to be based on performance during system peak periods in accordance with ISO Procedures
  - *Future FERC filing planned to apply same UCAP valuation methodology to Special Case Resources, to be effective November 1, 2006.*

# Overview of Tariff Changes (cont.)

- ✓ Unforced Capacity values for Intermittent Power Resources, Non-Schedulable Run-of-River Hydro Resources and Special Case Resources will be based on seasonal performance factors such that Unforced Capacity values for each Capability Period are based on performance from the prior like Capability Period
- ✓ Installed Capacity values of Intermittent Power Resources will be based on their nameplate values
- ✓ Details will be incorporated into the Installed Capacity Manual in parallel with FERC review such that final rules will effective in the Summer 2006 Capability Period
