

Short-Term Reliability Process Webpage

Keith Burrell

Manager, Transmission Studies

ESPWG/TPAS

October 5, 2020

Background

- **The purpose of this webpage is to create a central location in the NYISO website specific for the postings related to the Short-Term Reliability Process**
 - Various materials previously posted for the Generator Deactivation Process such as the Generator Deactivation Notices and Generator Deactivation Assessments will be moved to this webpage

Short-Term Reliability Process Webpage Overview

PLANNING / SHORT-TERM RELIABILITY PROCESS

SHORT-TERM RELIABILITY PROCESS

The NYISO executes its Short-Term Reliability Process on a quarterly basis to prepare for the impact of expected changes in supply and demand of power on the reliable operation of the New York State transmission system.

Additional Details

- Stakeholders will be notified on or before to October 13th when the Short-Term Reliability Process webpage can be accessed.

Our mission, in collaboration with our stakeholders, is to serve the public interest and provide benefit to consumers by:

- Maintaining and enhancing regional reliability
- Operating open, fair and competitive wholesale electricity markets
- Planning the power system for the future
- Providing factual information to policymakers, stakeholders and investors in the power system
