TCCs 65.3%	\$	(43,910.12)
Virtuals 34.7%	\$	(23,333.56)

An hourly charge is calculated from the monthly charge, based on the number of hours in that month. The hourly charge is then apportioned to the physical and non-physical market activity based on percentages listed above.

Product rates (for Withdrawals, Injections, TCCs, and Virtuals) are calculated by dividing the hourly charge by each product's market volume.

Charges for each product are determined by multiplying the market volume by the product rate.
