DAM Contract Balancing amounts are for payments made to generating units go make them whole for being dispatched below their Day-Ahead schedule, as a result of out-of-merit dispatches.

DAM Bid Production Cost Guarantees for Virtual Transactions are included in the chart and are shown from the inception of Virtual Transactions. These values are small and cannot be identified on the chart.

DAM residuals are revenue charged or returned to customers due to the under or over collection of funds. On this chart, negative values represent funds returned to Transmission Customers (through Transmission Owners' Transmission Service Charges).

A541	TCC Online Auction Automation	Status: The requirements generation for the TCC Auction Automation project was partially completed in 2004, following the review of the TCC auction processes performed by Bearing Point. The requirements process is being revisited in order to ensure that the recommendations that were presented can be fully incorporated in the delivered product. Requirement validation phase is underway following a planning kick-off held in early February. The kick off encompassed a short term (8 week) plan. An RFI/Vision document, straw man timelines, and executive summary with detail to determine the 'buy v. build' strategy was completed. Following detailed analysis of vendor response to RFI NYISO is currently reviewing confirmation of build strategy.  Planning and analysis in underway to deliver functionality with a phased approach. Currently developing detailed requirements and planning deliverables.  Deliverables: This project will take a phased approach to fully automate the TCC auction and data validation processes. Early phases will produce a set of data validation tools that will compliment the current processes. Final delivery will produce user interfaces that can support the online data entry, reporting of TCC auction information, and provide auction data to the auction analysis products. It is anticipated this project will continue into 2006.

Р	Project Description	Status and Milestone Deliverables
		<b>Status:</b> Development completed and code was delivered by vendor on May 31, 2005. Release deployment has been rescheduled from June to September to allow for an eight week testing cycle.
A764	15 Minute Scheduling	<b>Deliverable:</b> FERC mandated feature required to be implemented within 150 days of SMD go live date. This project will offer Market Participants more flexibility with their Real Time Bid Management, and enhance SMD2 functionality to address the loss of price chasing capability of units incapable of responding to five minute dispatch signals. The new software will perform 15-minute economic dispatch scheduling for nominally off-dispatch units during the Real-Time Commitment (RTC) execution and reflect those schedules into the Real-Time Dispatch (RTD) process.
		Status: This project is in the concept development phase.
A769	Scheduling of Combined Cycle Units	<b>Deliverables:</b> Market Participants have historically expressed concern that NYISO does not model or schedule combined cycle generating units to their most efficient capabilities, thus impacting both real-time operations and market outcomes. This project will deliver a scheduling software solution and network modeling optimization for combined cycle generating units. Software will perform 15-minute economic dispatch scheduling for nominally off dispatch units during the real-time commitment execution and reflect those schedules into the real-time dispatch process.
		Status: Planning in underway to test enhancements and schedule deployment. The functionality delivery is tentatively
		schedule for July. This is contingent upon FERC approval and favorable system conditions.
A821	SMD 2.2	<b>Deliverables:</b> Deliverable includes enhancement to software for RTD pricing.
A775	Consolidate NYISO Offices	<b>Status:</b> The responses to the Design/Build RFP were received on 5/20/05 with five of the six Architectural and Construction Management firms bidding on the project. The selection of an AE / Construction Manager for the project is expected by 6/10/05. Final approval of the site modifications was given by East Greenbush on 5/11/05. Final approvals from North Greenbush are expected at the 6/6/05 Town Meeting. Activities to close on the building are on-going with the plan to close on the building on 6/30/05. Once the NYISO closes on the building, work will start immediately on final design and construction of the fourth floor. A detailed migration plan to the 4th floor of the new HQ building has been developed. The goal is to move onto the 4th floor during the months of November and December. The development of a Data Center and Control Room migration plan has started and is expected to be completed by 10/31/05.
		Milestones: 6/30/05 Close on the building; 10/31/05 Completion of 4th floor renovations; 12/31/05 Migration out of Washington Avenue and onto the 4th floor of the new HQ building.

Р	roject Description	Status and Milestone Deliverables
		<b>Deliverables:</b> This project seeks to secure during 2005 ~150,000 square feet of office space to include administrative offices, alternate control center and back-up IT/disaster recovery functionality. During 2006, this facility would replace the current NYISO locations at Washington Avenue, Wolf Road, and Western Turnpike.
A780	e-Tagging 2.0	Status: The Business Owner/Stakeholder approved the functional requirement specifications on 1/4/2005. Development is complete. QA testing is in progress. The deployment date is scheduled for June 28, 2005.  Deliverables: Provide more flexibility in approval / denial of E-Tag requests. Prevent MIS bids with "Phantom" TagID's from flowing if not created by T-20.
		Completed Status: Deployed May 31, 2005.
A774	SMD 2.1	<b>Deliverables:</b> Following the implementation of SMD2 and its suite of applications, it is expected that a subset of planned functionality will fail to make the initial release. Included in this feature set is the original project Phase2b and Phase 3 features; these items are SMD2 post-live requirements as defined.
		Status: Deployed May 31, 2005.
A619	Controllable Tie Lines Scheduling & Pricing	<b>Deliverables:</b> This project will provide an external proxy bus representation for controllable tie lines (HVDC and/or PAR) which span two control areas. The project addresses both the external node pricing calculations as well as scheduling of primary and secondary party transactions. It also includes additional changes necessary for NY/NE coordination for the Cross Sound Cable project.
		Status: Technical components deployed on <i>April 26, 2005</i> . Site cut over completed May 24, 2005.
A699	Web Consolidation / Market Data Exchange (Portal)	<b>Deliverables:</b> Primary deliverable is to combine the existing two NYISO web sites. (MDEX.com and NYISO.com) Also enhancing Web publishing functionality and migrating to standardized security. Additional Portal release will be scheduled in 2005.
A573		Status: SMD2 was deployed on 02/01/2005
A573 A574 A577	SMD 2.0	<b>Delivery:</b> SMD2's EAI monitoring solution is supporting SMD parallel operations, allowing proactive management of EA processes in the SMD2 production environments. The second phase of the monitoring solution (enhanced reporting for computer operators).

P	roject Description	Status and Milestone Deliverables
A757	Billing: TCC Settlement	Status: Completed. November 2004  Deliverables: This project provides for changes to the BAS to allow for calculation and billing of settlements associated with TCC surcharges and tracking of working capital accounts as required in the TCC Settlement Agreement approved by FERC in July 2004.
		To be Scheduled
A767	MIS Enhancements: Comprehensive Bid Management System	Status: This project has not yet started.  Deliverables: This project will upgrade the web-based application structure to replace overlapping applications by allowing common components to support current application functionality and future application functional growth.
A770	Outage Schedule Reporting	Status: This project has not yet started.  Deliverables: The Outage Scheduling software was moved entirely to the Ranger system for both Scheduling and Operations to provide consistency. Due to the timeframe for the SMD2 project, the processes of creating the Outage Schedule reports on the primary database was left on a secondary database. The creation of the required reports needs to be ported to the RANGER system as intended.
A766	Self Supply of Reserves	Status: This project has not yet started.  Deliverables: FERC has ordered that the NYISO markets be expanded to provide a mechanism for Market Participants to self-supply for reserves. Project will need to be readdressed later in the year.
A706	Intra-Hour Transaction Scheduling (a.k.a. VRD)	<b>Deliverables:</b> In 2005, NYISO will conduct a pilot project to assess the ability to evaluate and schedule intra-hour transactions and to identify any operational issues with scheduling. Additional work in 2005 will be based on the outcome of the pilot program, however, it is not expected that any significant software development will be completed in 2005.
A771	Documentum Expanded Implementation	<b>Deliverables</b> : NYISO has a growing number of critical business documents, which are information assets and need to be managed as such. Documentum provides the tools to manage these critical documents. In addition, documentum can satisfy the demand for increased efficiency, quality and control in the document life cycle process through an enterprise-wide repository for all documents, automation of life cycle processes, document retention/archival, and SAS 70 compliance requirements. Documentum will provide a number of key functionality including: version control, workflow, check-in/out, document level security, full text search, and e-mail integration and tracking.
