Market Performance Highlights for August 2007

- LBMP for August is \$81.50/MWh, up from \$73.10/MWh in July 2007.
 - Average monthly cost is \$84.62/MWh, up from \$76.41/MWh in July 2007.
 - Day Ahead and Real Time LBMPs have increased from July 2007.
- Average daily sendout is 523GWh/day in August, up from 510GWh/day in July 2007 and in line with the August 2006 amount of 518GWh/day.
- Fuel prices are mixed this month.
 - Kerosene is \$15.76/mmBTU, down from \$16.27/mmBTU in July.
 - No. 2 Fuel Oil is \$14.11/mmBTU, down from \$14.76/mmBTU in July.
 - No. 6 Fuel Oil is \$10.03/mmBTU, up from \$10.00/mmBTU in July.
 - Natural Gas is \$6.90/mmBTU, up from \$6.80/mmBTU in July.
- Uplift is slightly higher this month relative to July 2007.
 - Uplift (not including NYISO cost of operations) is \$1.29/MWh, up from \$1.21/MWh in July 2007.
 - Total uplift (Schedule 1 components including NYISO Cost of Operations) slightly increased from \$30.7 million in July 2007 to \$32.3 million in August 2007.
- Price corrections continue to be at low levels.

Daily NYISO Average Cost/MWh (Energy & Ancillary Services)*
2006 Annual Average \$76.45/MWh
August 2006 YTD Average \$82.11/MWh
August 2007 YTD Average \$80.55/MWh

* Excludes ICAP payments.

NYISO Dollar Flows - Uplift - OATT Schedule 1 components

DAM Contract Balancing amounts are for payments made to generating units to make them whole for being dispatched below their Day-Ahead schedule, as a result of out-of-merit dispatches. DAM Bid Production Cost Guarantees for Virtual Transactions are included in the chart and are shown from the inception of Virtual Transactions. These values are small and cannot be identified on the chart. DAM residuals are revenue charged or returned to customers due to the under or over collection of funds.

NYISO In City Energy Mitigation (NYC Zone) 2006 - 2007

Percentage of committed unit-hours mitigated

This chart shows energy mitigation of the generating units in the NYC zone. Only hours during which a generating unit is scheduled are counted toward the 100%. If a unit's bid is mitigated at any point during an hour, that entire hour is counted as mitigated.

NYISO In City Energy Mitigation (NYC Zone) 2006 - 2007

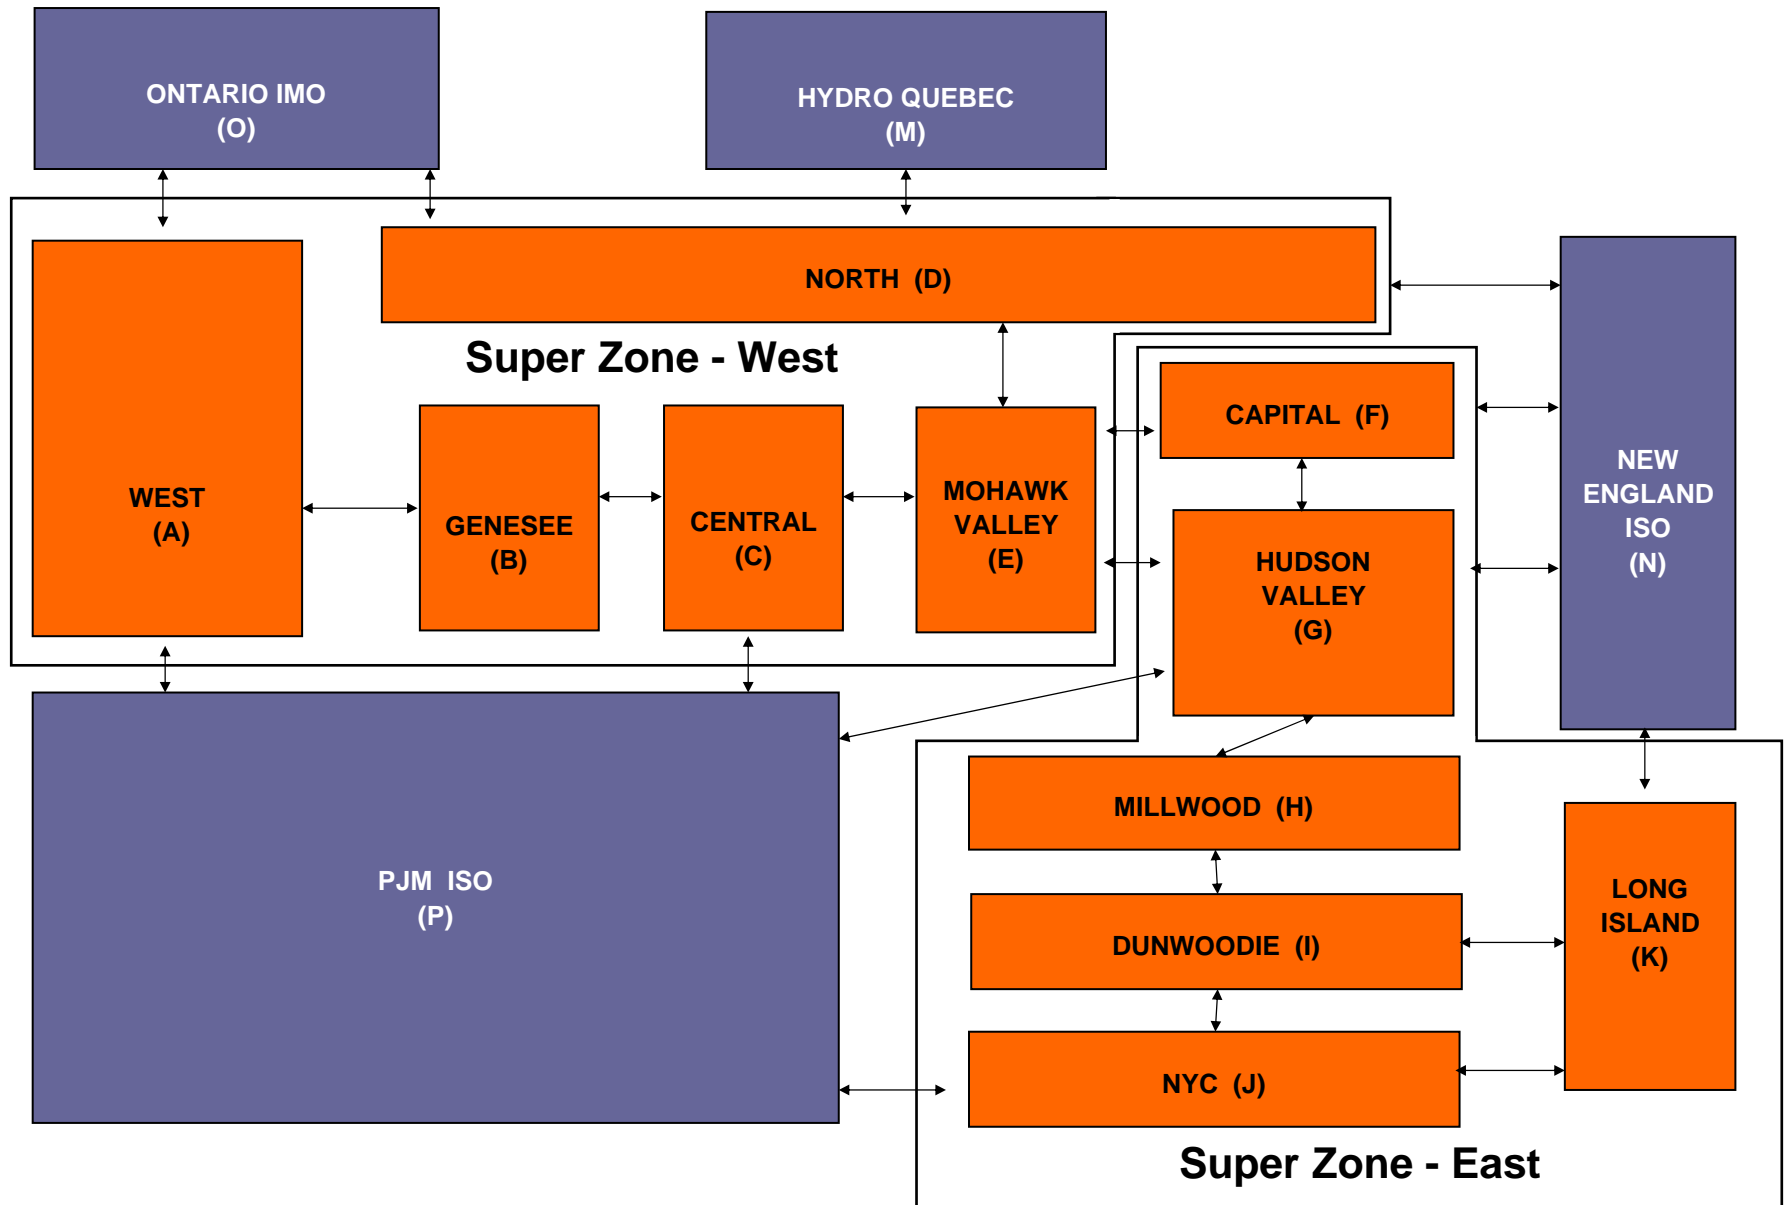

Monthly megawatt hours mitigated

Description		Status and Milestone Deliverables
Energy Marketplace Product Enhancements		
A767	MIS Enhancements: Comprehensive Bid Management System	<p>Status: The first phase of this multi-phase project was successfully deployed into production on January 16, 2007. The features that were deployed was the replacement of the new load and virtual bidding forms on the new architecture; performance assessment and post-production monitoring is ongoing to ensure desired results were achieved. The team is proceeding on schedule with development and testing activities for the next phase of the project, with a scope of replacing the transaction bidding interfaces as well as the Upload / Download mechanisms for both load and transactions. Deployment of the next phase is targeted for the 4th quarter of 2007. A successful MP testing session was held in May, with a second session scheduled for August.</p> <p>Deliverables: This project will upgrade the web-based application structure to replace overlapping applications by allowing common components to support current application functionality and future application functional growth. One of the deliverables will be the implementation of a more flexible and reliable application infrastructure for the market applications. This project is part of a multi-year effort that will lead to a replacement of the Market Information System (MIS) and related bidding and scheduling applications. This project will continue into 2008.</p>
A871	Enhanced Price Validation	<p>Status: The first phase of this multi-phase project was successfully deployed into production on March 1, 2007. The features deployed will enable the Price Validation team to more effectively track, report, and manage price corrections and reservations. The next phase of the project is in the development and testing phases and moving towards a 4th quarter 2007 deployment.</p> <p>Deliverables: The NYISO has investigated all known causes of pricing errors, and has taken a systematic approach to determine features and functions that can significantly enhance the price validation process. Product enhancements are proposed to implement proactive price monitoring, improved price reservations, and enhanced price corrections. The project will entail a multi-phase, multi-year implementation of tools to enhance the price monitoring, reservation, and correction processes for the NYISO markets. This project will continue through 2007.</p>
A922	PJM Proxy Bus Pricing	<p>Status: This project has completed the requirements, design, development, and testing phases. Software deployment was made in May 2007 with the features deactivated pending regulatory approval. FERC approval was received in early June and the final configuration steps were taken to complete the implementation.</p> <p>Deliverables: Design and implementation of changes to the price calculation methodology at the PJM proxy. The change is anticipated to make the pricing at the PJM interface more consistent with actual system operation and is design to increase trading at that proxy.</p>
A921	Transmission Constraint Pricing	<p>Status: This project has completed the requirements, design, development, and testing phases. Software deployment was made in May 2007 with the features deactivated pending regulatory approval. FERC approval was received in early June and the final configuration steps were taken to complete the implementation.</p> <p>Deliverables: Design and implementation of a Transmission Demand Curve methodology that would limit the impact on prices due to severe shadow costs as a result of transmission constraints. The change is anticipated to eliminate a certain form of price corrections.</p>

Description		Status and Milestone Deliverables
Auxiliary Market Product Enhancements		
A906	ICAP Auction Automation – Phase II	<p>Status: This project is in the development phase, and is proceeding according to the project schedule. Software deployment is targeted for the 4th quarter of 2007.</p> <p>Deliverables: Following the implementation of the first phase of the ICAP Auction Automation software project, a certain subset of enhancements are planned to complete the full suite of planned features. The scope of the next phase of the ICAP Auction Automation project will target the automation of certain administrative functions.</p>
A857	Demand Response for Ancillary Services	<p>Status: This project is in the detailed requirements phase. Initial planning and requirements documentation is underway; development is expected to initiate in 2007, with implementation targeted for early 2008. A draft functional requirements document has been produced and is being circulated internally for review. Technical design for the end-state solution has proven more difficult than expected, and this point makes meeting the commitment for a 4th quarter 2007 delivery unlikely. The current proposal would help mitigate the political risk of missing the commitment by delivering more functionality than originally offered.</p> <p>Deliverables: As directed by the FERC, execution of software changes that will permit the integration of demand side resources (“DSRs”) into the NYISO real-time ancillary services and energy markets.</p>
TCC Marketplace Product Enhancement		
A796	TCC Auction Automation – Phase 2	<p>Status: This project is in a detailed requirements and design phase. An inter-departmental team has been formed to document the detailed use cases necessary to automate the database management functions. The design milestone defined by completion and approval of the detailed use cases was achieved on schedule in August 2007. Recent resource constraints on the part of the business owner (Aux. Market Operations) had caused significant schedule risk, but mitigation steps have enabled the project to get back on schedule.</p> <p>Deliverables: Following the implementation of the first phase of the TCC Auction Automation software project (Automation of the Awards Process), following phases will deliver the Database / Inventory Automation (Phase 2) and Bidding (Phase 3) functionality required to fully automate the TCC markets. An iterative development approach will be utilized to provide incremental functional deliverables starting in the second half of 2007, but full development of this phase will not be complete until third quarter 2008. Phase 3 is scheduled to follow in late 2008.</p>
Operations and Reliability Product Enhancements		
A916	HQ Netting	<p>Status: This project has been completed. Approval has been achieved from Market Participants on the necessary rule changes. Final software deployment and activation was performed on schedule at the end of June 2007.</p> <p>Deliverables: Implementation of a second proxy bus definition at the Hydro Quebec interface. The software would establish a separate proxy bus for imports and wheel through transactions. This feature is expected to increase the volume of trades at the HQ interface.</p>

Description		Status and Milestone Deliverables
A843	Integration of OOM and SRE Applications	<p>Status: This project is in the software design phase; detailed requirements specification has been completed on schedule to meet the 2nd quarter commitment; software design to has started with a planned implementation in 2008.</p> <p>Deliverables: Replacement of the Out of Merit (OOM) and Supplemental Resource Evaluation (SRE) applications used by the control room floor. These applications are currently built upon an unsupported platform (Oracle Forms) and can be design to be more efficient and error prone if they are consolidated into a single suite of application functions.</p>
A862	Controllable Tie Line Additions: Dennison-Cedars Line	<p>Status: This project is an application of the Generic Controllable Tie Line logic deployed for the Cross Sound Cable n 2005. ABB Ranger and MIS model maintenance tasks required for deployment were successfully deployed, on schedule, in October 2006. Approval has been achieved from Market Participants on the necessary rule changes. Operational protocols have been developed for implementation, and all necessary regulatory approvals have been received. Commencement of operations as a controllable line is on hold pending resolution of facility owner concerns regarding DOE obligations / liabilities from the export permit.</p> <p>Deliverables: The Dennison-Cedars Line is a controllable tie line between Zone D in NY and HQT. The project, when implemented, will support both import and export transactions independent of the existing NY/HQT interconnection.</p>
A862	Controllable Tie Line Additions: 1385 Line	<p>Status: This project is an application of the Generic Controllable Tie Line logic deployed in 2005. ABB Ranger and MIS model maintenance tasks required for deployment were successfully deployed, on schedule, in October. Final implementation steps were performed in June.</p> <p>Deliverables: The 1385 Line is a controllable tie line between Long Island and New England. The project, when implemented, will support both import and export transactions independent of the existing NY/NE interconnections.</p>
A862	Controllable Tie Line Additions: Project Neptune Line	<p>Status: This project has been completed. ABB Ranger and MIS model maintenance tasks required for deployment were successfully deployed, on schedule, in October. Approval has been achieved from Market Participants on the necessary rule changes, and regulatory approval has been received from FERC. Final implementation steps were performed in June.</p> <p>Deliverables: The Neptune Line is an HVDC line between Long Island and New Jersey. The project, when implemented, will provide an additional external proxy bus on Long Island that is scheduled and priced independent of other external proxies. As a merchant transmission facility, the Neptune Line may require special bidding protocols similar to those that apply to the Cross Sound Cable. Actual requirements beyond the Generic Controllable Tie lines logic are being defined through the concept development effort.</p>

Description	Status and Milestone Deliverables
-------------	-----------------------------------

Financial Service Product Enhancements	
--	--

A845	Settlement System Replacement (SSR) / Billing Engine	<p>Status: This project has completed the final testing phases. An iterative development approach has been employed where groups of the billing rules are being ported to the new engine in phases. The project schedule had slipped from the original schedule due to a longer than expected development cycle for the system framework and infrastructure build-out, as well as planned scope expansion resulting from settlements modifications driven by other business critical projects. Certification of the billing software (Project A885) was a necessary prerequisite for deployment of this project, but was performed on schedule. The software changes necessary to operate the new billing engine was deployed to production in June, but activation had been delayed in order to allow MP system changes required to adapt to minor data formatting changes in the Decision Support System (DSS). The software was activated successfully on August 9.</p> <p>Deliverables: Implementation of a rules-based design as a replacement to the settlements engine in the Billing and Accounting System (BAS). Project will leverage technology investment made as part of the Billing Simulator and will lead to a higher performing calculation engine for billing, as well as a more flexible architecture for managing future changes to the settlements processes. This project is part of a multi-year effort to replace the entire billing system including, the invoicing components, web-based reconciliation, and integration of certain credit functions. This project is scheduled to continue into 2008.</p>
A885	Settlements Rules Engine Certification	<p>Status: The joint NYISO and PA Consulting project team has finalized settlement tariff rule certification. The process entailed the development of a reduced model against which the settlement rules are being tested. A limited number of variances had been identified, but significant schedule / compliance risks were not detected. A detailed internal review of all settlement use cases identified the need to make certain tariff clarifications in order to remove any ambiguity between the language in the tariff and rules implemented in software. Regulatory processes to support this certification have been completed; the certification of the settlements engine has been received. This project is completed.</p> <p>Deliverables: Third party certification (PA Consulting) of the implementation of the rules in the new settlements engine is full compliant with all applicable tariffs. Project is a prerequisite for the Settlements Sys Repl. (SSR) project.</p>
A893	Web Based Reconciliation Replacement	<p>Status: This software for the first production deliverable of this project was successfully deployed into production in May. A series of technical conferences had previously been held with Market Participants to capture of the highest priority features needed in the new application, as well as understand the desired feature additions. The schedule for this project was accelerated from the original commitment in order to meet Market Participant expectations. A phased delivery schedule is being proposed that will enable delivery of critical performance functions in mid-2007, followed by lower priority features later. Market Trails started in late August for the second set of deliverables. MP feedback on the early deliverable has been extremely positive.</p> <p>Deliverables: Following a successful replacement of the settlements engine of the Billing and Accounting System (BAS), the NYISO will continue to leverage the technology investment made as part of that project by replacing the Web Based Reconciliation (WBR) application used to facilitate meter data input to the settlements process. The capabilities of the WBR application are criticized due to their performance as well as query and reporting capabilities. Enhancements to this capability will help support shorter settlement cycles.</p>

Description		Status and Milestone Deliverables
Business Intelligence Product Enhancements		
A849	DSS Pricing and Operational Data Mart	<p>Status: This software for delivery of the DSS Pricing Datamart was successfully deployed into product during the last week of March 2007. Market Participant utilization and performance metrics of the new system are being monitored, and user adoption has been very good.</p> <p>Deliverables: During recent years, the NYISO has made a significant investment in data warehousing technology through the implementation of the Decision Support System (DSS) to support the NYISO settlements processes. This project will expand the DSS customer base by delivering pricing data that will support the price validation processes and provide greater transparency to the NYISO markets.</p>
Other NYISO Key Projects		
A775	Consolidate NYISO Offices	<p>Status: Personnel relocation activities have completed that enabled the NYISO to vacate the Washington Avenue and Wolf Road facilities and fully occupy the 2nd, 3rd and 4th floors of the new Krey Corporate Center (KCC) facility. The migration of the data center to the KCC 2nd floor has completed, and the activation of the Alternate Control Center functions at the KCC was completed, on schedule.</p> <p>Deliverables: This project seeks to secure ~150,000 square feet of office space to include administrative offices, alternate control center and back-up IT/disaster recovery functionality. Once ready, this facility would enable the migration from former / existing NYISO facilities at Washington Avenue, Wolf Road, and Western Turnpike.</p>

NYISO REGULATORY FILINGS – August 2007

- Aug. 2, 2007 NYISO filing of request for extension of time to submit responses, request for expedited action, and request for waiver of notice and comment period regarding Order No. 681 involving long term transmission rights (ER07-521-000)
- Aug. 3, 2007 NYISO filing of compliance errata to NYISO 7/31/07 compliance filing to revise attachment Z of OATT involving small generator interconnection procedures and agreement (ER06-311-000)
- Aug. 8, 2007 NYISO filing of revision to its 6/4/07 request for waiver to coordinate interchange business practice standards adopted by NAESB (ER07-995-001, RM05-5-003)
- Aug. 14, 2007 NYISO second answer to Hudson Transmission Owners complaint against the NYISO (EL07-70-000)
- Aug. 17, 2007 NYISO filing answer to 330 Fund motion to leave to answer NYISO's 7/19/07 answer to complaint (EL07-78-000)
- Aug. 24, 2007 NYISO filing, in compliance with FERC's July 27, 2007 Technical Conference Order and August 3, 2007 Notice of Extension of time, of a response to FERC's questions regarding its pending Compliance Filing (ER07-521-000)
- Aug. 30, 2007 NYISO Filing of Motion to Intervene Out of Time and Comments on FERC Deficiency Letter to National Grid issued July 31, 2007 (ER07-1019-000, ER07-1020-000, ER07-1021-000)
- Aug. 31, 2007 NYISO Filing of Small Generator Interconnection Agreement among the NYISO, NYSEG, and Bio-Energy Partners, LLC, and request for waiver of 60-day notice period (ER07-1329-000)
- Aug. 31, 2007 NYISO filing of proposed amendments to the Market Power Mitigation Measures in Attachment H of its Services Tariff in order to clarify and revise procedures for implementing the Real-time Guarantee Payment Impact Test (ER07-1334-000)

This list is current as of 9/6/2007 11:59 AM

FERC ORDERS – August 2007

- Aug. 3, 2007 FERC notice granting NYISO an extension until 8/24/07 to submit responses regarding its long term firm transmission rights proposal (ER07-521-000)
- Aug. 7, 2007 FERC letter order accepting NYISO tariff revisions regarding the calculation of supplemental event credits and bid production cost guarantee payments (ER07-1033-000)
- Aug. 14, 2007 FERC letter order accepting a joint NYISO and NYSEG filing of a non-conforming small generator interconnection agreement with Seneca Energy (ER07-1074-000)
- Aug. 15, 2007 FERC order denying Con Ed's request for rehearing of two orders regarding its complaint v PSE&G, PJM and NYISO concerning certain transmission service contracts (EL02-23-013)
- Aug. 16, 2007 FERC letter order accepting tariff revisions granting NYISO the authority to temporarily suspend a deficient ICAP Supplier's privileges to participate in the ICAP markets (ER07-1104-000)
- Aug. 22, 2007 FERC letter order accepting revised tariff sheets regarding the correct effective date for certain sheets related to implementation of scheduled lines (ER07-570-003)
- Aug. 22, 2007 FERC order granting the Hudson Transmission Partners complaint v NYISO regarding the interpretation and implementation of the interconnection queuing provisions of NYISO's OATT (EL07-70-000)

This list is current as of 9:23 P.M. August 23, 2007.
