

## Price Correction Report Reference Document

Note: This document applies to correction reports for 2016 and forward. See below for explanations for each element in the Price Correction Report.

<b>A</b>	Interval: 04/06/2016 04:00:00							
<b>B</b>	Error Type: Incorrect Price Setting Resource							
<b>C</b>	Error Description: Operator Input							
<b>D</b>	Correction Mode: Replace w/Preceding Interval							
<b>E</b>	Comments: Incorrect out of merit							
		Zone / Proxy	Energy	10 Min Spin	10 Min Non-Spin	30 Min	Reg Capacity	Reg Movement
		CAPITL	C					
		CENTRL	C					
		DUNWOD	C					
		GENESE	C					
		HUD VL	C					
		LONGIL	C					
		MHK VL	C					
		MILLWD	C					
		N.Y.C.	C					
		NORTH	C					
		WEST	C					
		HQ_GEN_CEDARS_PROXY	C					
		HQ_GEN_IMPORT	C					
		HQ_GEN_WHEEL	C					
		N.E._GEN_SANDY PD	C					
		NPX_GEN_1385_PROXY	C					
		NPX_GEN_CSC	C					
		O.H._GEN_BRUCE	C					
		PJM_GEN_HTP_PROXY	C					
		PJM_GEN_KEYSTONE	C					
		PJM_GEN_NEPTUNE_PROXY	C					
		PJM_GEN_VFT_PROXY	C					

- A** The real-time OASIS interval timestamp that was corrected.
- B** Error types are either Calculation Error or Incorrect Price Setting Resource. Refer to Market Administration and Control Area Services Tariff Attachment E for further detail on each type of error.
- C** Additional information on the nature/underlying cause of the error (e.g., software error, posting error, telemetry, operator input, etc.)
- D** The methodology used for correcting the interval (e.g., replaced prices with preceding interval, replaced prices with subsequent interval, recalculation, etc.)
- E** Additional comments regarding the correction. If the "Comments" field specifies "Proxy Pricing," the External Interface Congestion included in the real-time price was corrected.
- If a real-time proxy price is corrected by applying external congestion from a different RTC execution and/or timestamp that would normally be associated with the real-time interval, the External Interface Congestion which is applied will be defined in the "Comments" by the RTC execution time (Execution) and timestep (TS) which had the appropriate external interface congestion for the interval being corrected.
  - If a real-time proxy price is corrected by removing External Interface Congestion the "Comments" field will contain "Removed erroneous external congestion."
- F** A 'C' indicates that the price for the zone/proxy product has been corrected.
