

The following table summarizes the Operational Base Flow (OBF) utilized in the NYISO's Transmission Congestion Contracts (TCC) market models for the specified TCC auctions (or auction rounds) when all Waldwick PARs (Waldwick 230 kV PS4_E2257, PS2_F2258, and PS1_O2267) and ABC PARs (Farragut 345 kV TR11 and TR12 and Goethals 345 kV BK_1N) are modeled as in service.

See Transmission Congestion Contracts Manual Attachment T (TCC Market PJM-NYISO Interconnection Scheduling Protocol) for additional details on how the expected flows over the ABC, JK and Hopatcong-Ramapo Interconnections with the PJM Control Area are established in the TCC market, including adjustments to the OBF in the event that any of the Waldwick or ABC PARs are modeled as out of service in a TCC auction (or auction round).

The OBFs defined above will be reduced to the values shown in the following table due to the Hudson-Farragut 345 kV line B3402 and Marion-Farragut 345 kV line C3403 and their associated Farragut 345 kV TR11 and TR12 PARs being modeled as out of service in the specified TCC auctions (or auction rounds).
