

Modeling Improvements for Capacity Accreditation

Nikolai Tubbs & Brendan Long

ICAPWG

March 4, 2024

Agenda

- **Gas Constraints Tariff Revisions**
- **ICAP Supplier Bidding Requirements**
- **Next Steps**

Proposed Tariff Revisions

Proposed Tariff Revisions: Gas Constraints

- **Tariff related to Natural Gas Constraints include:**
 - MST 5.12 changes include:
 - 5.12.1.15 – Establishment of Dual Fuel Testing Requirement
 - 5.12.6.2.2 - UCAP Adjustment for Partial Firm Units
 - 5.12.8 – Detailed Dual Fuel Testing Requirement
 - 5.12.15 – CARC Characteristic Elections
 - MST 5.14 changes include:
 - 5.14.2.3.5 – Shortfall deficiency charge
 - MST 23.4 changes include:
 - 23.4.5.4 – Exemption from Must Offer Requirements of Pivotal Suppliers

Proposed Tariff Revisions: Gas Constraints

- Included with today's material is draft tariff language with incremental changes from the 2/20 ICAPWG
 - Incremental changes have been made to MST 5.12, MST 5.14, and MST 23.4 and are highlighted in yellow
 - Changes to MST 5.12 include:
 - Clarification that an Installed Capacity Supplier can submit firm fuel data from January 1 of the calendar year preceding a subject Capability Year until July 31 of the subject Capability Year.
 - Minor clarifying edits
 - Changes to MST 5.14 include:
 - Clarification of the shortfall penalty application based on whether the loss of firm status was due to a failure to substantiate or failure to maintain firm status
 - In the first full paragraph on page 35, changing “ICAP Spot Market Auction” to “Capability Period Auction, Monthly Auction, and/or ICAP Spot Market Auction”
 - Added language permitting the ability to restore firm status pursuant to ISO Procedures
 - Minor clarifying edits
 - Changes to MST 23.4 contain only minor clarifying edits.

ICAP Supplier Bidding Requirements

Review

■ Issue

- The existing market rules do not explicitly prohibit Installed Capacity Suppliers from fulfilling their availability requirement (MST 5.12.7) by offering a portion of their capacity in the DAM at an Emergency Upper Operating Limit (UOLe)
- Emergency Capacity is largely unavailable because operators infrequently use it

■ Proposal

- Each Installed Capacity Supplier, unless explicitly exempted, will schedule a bilateral or bid energy in the DAM with a Normal Upper Operating Limit (UOLn) at a level equal to or greater than its Installed Capacity Equivalent of Unforced Capacity supplied, or notify the ISO of any outages

■ Exemptions

- Combined Cycle Units qualified to sell reserves in their duct-firing range
- Block Loaded Combustion Turbines that can be committed in either peak firing or normal firing mode

Proposed Tariff Revisions: UOLe vs UOLn

- The proposed changes are reflected in Draft MST 5.12.7 which is included with this presentation
 - Incremental changes from the 02/20 ICAPWG are highlighted in yellow
 - Clarify the availability requirements before and after Capability Year beginning 05/01/2025
 - Clarify that the difference between UOLe and UOLn for exempted units shall not exceed the increase in the unit's maximum output level that results from the operation of their exempted technology (peak-firing or duct-firing)

Next Steps

Next Steps

- March 27th MC Meeting
- Q2 2024: Board Review and FERC filing
- For any questions or feedback please email ntubbs@nyiso.com or blong@nyiso.com

Our Mission & Vision

Mission

Ensure power system reliability
and competitive markets for New
York in a clean energy future

Vision

Working together with stakeholders
to build the cleanest, most reliable
electric system in the nation
