# CARIS 2019 Fuel Price Forecast

- NYISO presented an updated forecasting methodology for developing the Natural gas price forecast in the ESPWG on June 25, 2019
- 3 of the NYCA gas-regions – Zones A – E, Zones F – I, and Zone K – are proxied by blends of 2 or more trading hub prices and Zone J is represented by Transco Zone 6 (NY)
- The salient change from the CARIS 2017 methodology was to use 3-year averages of plant energy output as blending weights as opposed to 3-year averages of Summer DMNCs
